National Bureau of Standards, 1961 *Endoscopic Classification of Representations of Quasi-Split Unitary Groups* Chung Pang Mok, 2015-04-09 In this paper the author establishes the endoscopic classification of tempered representations of quasi split unitary groups over local fields and the endoscopic classification of the discrete automorphic spectrum of quasi split unitary groups over global number fields The method is analogous to the work of Arthur on orthogonal and symplectic groups based on the theory of endoscopy and the comparison of trace formulas on unitary groups and general linear groups *Algebraic $\overline{\mathbb{Q}}$ -Groups as Abstract Groups* Olivier Frécon, 2018-10-03 The author analyzes the abstract structure of algebraic groups over an algebraically closed field For of characteristic zero and a given connected affine algebraic $\mathbb{Q}$ group the main theorem describes all the affine algebraic $\mathbb{Q}$ groups such that the groups and are isomorphic as abstract groups In the same time it is shown that for any two connected algebraic $\mathbb{Q}$ groups and the elementary equivalence of the pure groups and implies that they are abstractly isomorphic In the final section the author applies his results to characterize the connected algebraic groups all of whose abstract automorphisms are standard when is either $\mathbb{Q}$ or of positive characteristic In characteristic zero a fairly general criterion is exhibited *Global Flood Hazard* Guy J-P. Chataur,Martintxo Saralegi-Aranguren,Daniel Tanré,2018-08-09 Let X be a pseudomanifold In this text the authors use a simplicial blow up to define a cochain complex whose cohomology with coefficients in a field is isomorphic to the intersection cohomology of X introduced by M Goresky and R MacPherson The authors do it simplicially in the setting of a filtered version of face sets also called simplicial sets without degeneracies in the sense of C P Rourke and B J Sanderson They define perverse local systems over filtered face sets and intersection cohomology with coefficients in a perverse local system In particular as announced above when X is a pseudomanifold the authors get a perverse local system of cochains quasi isomorphic to the intersection cochains of Goresky and MacPherson over a field We show also that these two complexes of cochains are quasi isomorphic to a filtered version of Sullivan s differential forms over the field $\mathbb{Q}$ In a second step they use these forms to extend Sullivan s presentation of rational homotopy type to intersection cohomology [Lie Theory and Its Applications in Physics](#)
