This volume contains the proceedings of the virtual workshop on Computational Aspects of Discrete Subgroups of Lie Groups held from June 14 to June 18, 2021 and hosted by the Institute for Computational and Experimental Research in Mathematics (ICERM), Providence, Rhode Island. The major theme deals with a novel domain of computational algebra: the design, implementation, and application of algorithms based on matrix representation of groups and their geometric properties. It is centered on computing with discrete subgroups of Lie groups, which impacts many different areas of mathematics such as algebra, geometry, topology, and number theory. The workshop aimed to synergize independent strands in the area of computing with discrete subgroups of Lie groups to facilitate solution of theoretical problems by means of recent advances in computational algebra.

Imprimitive Irreducible Modules for Finite Quasisimple Groups Gerhard Hiss, William J. Huse, Kay Magaard, 2015-02-06. Motivated by the maximal subgroup problem of the finite classical groups, the authors begin the classification of imprimitive irreducible modules of finite quasisimple groups over algebraically closed fields K . A module of a group G over K is imprimitive if it is induced from a module of a proper subgroup of G . The authors obtain their strongest results when $\text{char } K = 0$, although much of their analysis carries over into positive characteristic. If G is a finite quasisimple group of Lie type, they prove that an imprimitive irreducible KG module is Harish-Chandra induced. This being true for $\text{rm char } K$ different from the defining characteristic of G , the authors specialize to the case $\text{char } K = 0$ and apply Harish-Chandra philosophy to classify irreducible Harish-Chandra induced modules in terms of Harish-Chandra series as well as in terms of Lusztig series. The authors determine the asymptotic proportion of the irreducible imprimitive KG modules when G runs through a series of groups.

of fixed twisted Lie type One of the surprising outcomes of their investigations is the fact that these proportions tend to 1 if the Lie rank of the groups tends to infinity For exceptional groups G of Lie type of small rank and for sporadic groups G the authors determine all irreducible imprimitive KG modules for arbitrary characteristic of K **Selected Papers With**
