

The Meyer Sound S-1 is a single-channel active signal processor designed for use with the USM-1 Loudspeaker. It occupies a single 1 1/2-inch rack space.

The functions of the S-1 are:

- Active crossover for bi-amplification
- SpeakerSense™ driver protection with MultiSense™ function
- True excursion limiting to protect the USM-1 drivers
- Loudspeaker frequency and phase response alignment

Connections

The S-1 operates at line level and is intended to be the final component in the signal chain before the power amplifier. Connections between the S-1 and the power amplifier should be made according to the diagram above.

1. **Signal inputs** to the S-1 may be either balanced or unbalanced. For best signal-to-noise ratio, use balanced connections operating at +4 dBu nominal. The S-1 will accept peak input levels up to +26 dBu balanced, or +20 dBu unbalanced.

Note: The S-1 utilizes Meyer Sound's exclusive ISO™ input. Pins 1, 2 and 3 are transformer-isolated, and the connector shell is connected to earth ground. The Input GND/ Lift switch controls the connection between pin 1 and circuit common, which is tied to AC/chassis ground through a 500 ohm resistance. If hum problems occur, this switch may be used to control ground loops in the system.

2. **SpeakerSense™** connections are made from the output of the power amplifier back to the S-1 Sense inputs. The Hi output of the power amplifier must be connected to the Hi Sense input, and the Lo output of the power amplifier to the Lo Sense input.

The Sense connection **must** be made in order for the driver protection circuitry to operate properly.

Note: The S-1 Sense inputs incorporate Meyer Sound's exclusive MultiSense™ function, which allows use of multiple power amplifiers driven in parallel from a single S-1 and having different voltage gains and/or power ratings. The S-1 accommodates up to two power amplifiers, and provides a separate Sense input for each. The MultiSense circuit automatically tracks the power amplifier with the greatest output swing to control the system protection circuitry. These inputs are polarity-sensitive; be certain that they are connected with correct polarity, as indicated on the S-1 rear panel.

3. **Signal outputs** from the S-1 are active balanced at +4 dBu nominal operating level, with pin 1 tied to earth/chassis ground through a 500 ohm resistance. The maximum output level is +26 dBu balanced (+20 dBu unbalanced).
4. Connections between the power amplifier output and the USM-1 should be made in accordance with the **USM-1 Operating Instructions**. These connections **must** be verified for correct polarity and correct channel assignment (Hi to Hi, Lo to Lo).
