CHAPTER 2

Foundations of Quality Management.

Teaching Notes

This chapter introduces the concept of quality in production and service systems and develops the idea that quality is central to effective operation of these systems. Students should be encouraged to develop an understanding of the fact that quality is not an "add-on" to organizational processes, but that it is "a way of doing business." Key objectives should be:

- To understand and appreciate the contributions of W. Edwards Deming, Joseph Juran, and Philip Crosby who are recognized as the most influential thinkers and leaders of modern quality management. A. V. Feigenbaum and Kaoru Ishikawa have also made significant contributions to modern quality management practices.
- To learn Deming's philosophy, based on improving products and services by reducing uncertainty and variation in design, manufacturing, and service processes, driven by the leadership of top management.
- To appreciate Deming's key tenets, encompassed in **The Deming Chain Reaction**, his **14 Points** representing the practices that Deming advocated for achieving quality excellence, and the four simple elements that he called a **System of Profound Knowledge**:
 - Appreciation for a system
 - Understanding variation
 - Theory of knowledge
 - Psychology
- To define a **system** as a set of functions or activities within an organization that work together for the aim of the organization. Systems thinking is critical in applying quality principles because the organizational linkages among various functions of an organization must be in alignment to meet the needs of customers and other stakeholders.
- To understand that variation exists in any production and service process, generally due to factors inherent in the design of the system, which cannot easily be controlled. Excessive variation results in products that fail or perform erratically and inconsistent
