United States Naval Academy,1914 *Power Plant Engineering* ,1922 The Steiner Tree Problem Hans Jürgen Prömel,Angelika Steger,2012-12-06 A very simple but instructive problem was treated by Jacob

Steiner the famous representative of geometry at the University of Berlin in the early nineteenth century Three villages A B C are to be joined by a system of roads of minimum length Due to this remark of Courant and Robbins 1941 a problem received its name that actually reaches two hundred years further back and should more appropriately be attributed to the French mathematician Pierre Fermat At the end of his famous treatise Minima and Maxima he raised the question to find for three given points in the plane a fourth one in such a way that the sum of its distances to the given points is minimized that is to solve the problem mentioned above in its mathematical abstraction It is known that Evangelista Torricelli had found a geometrical solution for this problem already before 1640 During the last centuries this problem was rediscovered and generalized by many mathematicians including Jacob Steiner Nowadays the term Steiner problem refers to a problem where a set of given points P_1, P_n have to be connected in such a way that i any two of the given points are joined and ii the total length measured with respect to some predefined cost function is minimized
