The Construction Zone Denis Newman, Peg Griffin, Michael Cole, 1989-04-28 In its description of several years of painstaking classroom observations and carefully crafted experimental interventions the construction zone makes clear the cleavage lines between the everyday requirements of classroom teaching and the practice of experimental psychologists The best intentions of researchers to improve education are often undermined by such differences The construction zone is the shared psychological space within which teachers construct environments for their students intellectual development and students construct deeper understandings of the cultural heritage embodied in the curriculum The core of the book is a set of analyses of children's developmental changes during classroom lessons and individual tutorials designed to teach basic concepts in such diverse areas as natural science social studies and arithmetic Fusing techniques currently in wide use in microsociology experimental psychology and ethnographic studies of the classroom the authors offer a compelling vision of intellectual development as a process of joint constructive interaction mediated by cultural artifacts Their approach makes it possible to retain the strength of a developmental perspective which treats intellectual change as a constructive process in the spirit of Piaget while making it clear that developmental change is simultaneously a social process of cultural

Skovsmose,2022-12-09 Creating landscapes of investigation is a primary concern of critical mathematics education It enables us to organise educational processes so that students and teachers are able to get involved in explorations guided by dialogical interactions It attempts to address explicit or implicit forms of social injustice by means of mathematics and also to promote a critical conception of mathematics challenging the assumption that the subject represents objectivity and neutrality Landscapes of Investigation provides many illustrations of how this can be done in primary secondary and university education It also illustrates how exploring landscapes of investigation can contribute to mathematics teacher education programmes This edited volume is the result of a collaboration established through the Colloquium in Research in Critical Mathematics Education which took place in 2016 2018 and 2019 in Brazil Its twenty eight contributors are young researchers from Brazil Chile Colombia India Mexico and the USA who are dedicated to the further development of critical mathematics education Organised in eighteen chapters the volume presents examples of engaging students from a diversity of social and economic backgrounds age ranges and abilities across different countries The chapters present original findings on the social aspects of all levels of mathematics education Landscapes of Investigation is of particular relevance to those with an interest in the potential of mathematics education to challenge social injustices *Using Language Learning*

Materials Claudia Fernández,Adon Berwick,2022-07-15 This volume centres on the domain in materials research that is the least investigated how language teachers and learners use materials Issues such as how the use of materials by teachers and learners inform materials writers whether and how teachers perspectives influence how they perceive and enact materials and what are the factors that contribute to teachers use of both traditional and innovative textbooks are discussed here The volume also addresses some of the theoretical frameworks that inform materials use and will advance the readers understanding of this promising area of materials research It will appeal to postgraduate students teachers materials developers and researchers *Adaptive Hypertext and Hypermedia* Peter Brusilovsky,Alfred Kobsa,Julita

Vassileva,2013-04-17 Hypertext hypermedia systems and user model based adaptive systems in the areas of learning and information retrieval have for a long time been considered as two mutually exclusive approaches to information access Adaptive systems tailor information to the user and may guide the user in the information space to present the most relevant material taking into account a model of the user s goals interests and preferences Hypermedia systems on the other hand are user neutral they provide the user with the tools and the freedom to explore an information space by browsing through a complex network of information nodes Adaptive hypertext and hypermedia systems attempt to bridge the gap between these two approaches Adaptation of hypermedia systems to each individual user is increasingly needed With the growing size complexity and heterogeneity of current hypermedia systems such as the World Wide Web it becomes virtually impossible to impose guidelines on authors concerning the overall organization of hypermedia information The networks therefore become so complex and unstructured that the existing navigational tools are no longer powerful enough to provide orientation on

where to search for the needed information It is also not possible to identify appropriate pre defined paths or subnets for users with certain goals and knowledge backgrounds since the user community of hypermedia systems is usually quite inhomogeneous This is particularly true for Web based applications which are expected to be used by a much greater variety of users than any earlier standalone application A possible remedy for the negative effects of the traditional one size fits all approach in the development of hypermedia systems is to equip them with the ability to adapt to the needs of their individual users A possible way of achieving adaptivity is by modeling the users and tailoring the system s interactions to their goals tasks and interests In this sense the notion of adaptive hypertext hypermedia comes naturally to denote a hypertext or hypermedia system which reflects some features of the user and or characteristics of his system usage in a user model and utilizes this model in order to adapt various behavioral aspects of the system to the user This book is the first comprehensive publication on adaptive hypertext and hypermedia It is oriented towards researchers and practitioners in the fields of hypertext and hypermedia information systems and personalized systems It is also an important resource for the numerous developers of Web based applications The design decisions adaptation methods and experience presented in this book are a unique source of ideas and techniques for developing more usable and more intelligent Web based systems suitable for a great variety of users The practitioners will find it important that many of the adaptation techniques presented in this book have proved to be efficient and are ready to be used in various applications
