Immediate Awareness M. Estep, 2013-06-29 This book is multi and interdisciplinary in both scope and content. It draws upon philosophy, the neurosciences, psychology, computer science, and engineering in efforts to resolve fundamental issues about the nature of immediate awareness. Approximately the first half of the book is addressed to historical approaches to the question whether or not there is such a thing as immediate awareness and if so what it might be. This involves reviewing arguments that one way or another have been offered as answers to the question or ways of avoiding it. It also includes detailed discussions of some complex questions about the part immediate awareness plays in our overall natural intelligence. The second half of the book addresses intricate and complex issues involved in the computability of immediate awareness as it is found in simple ordinary things human beings know how to do as well as in some highly extraordinary things some know how to do. Over the past 2,500 years human culture has discovered, created, and built very powerful tools for recognizing, classifying, and utilizing patterns found in the natural world. The most powerful of those tools is mathematics, the language of nature. The natural phenomenon of human knowing of natural intelligence generally is a very richly textured set of patterns that are highly complex, dynamic, self-organizing, and adaptive.
