Intelligentized Methodology for Arc Welding Dynamical Processes Shan-Ben Chen, Jing Wu, 2008-10-20 Welding handicraft is one of the most primordial and traditional techniques mainly by manpower and human experiences Weld quality and efficiency are therefore strictly limited by the welder's skill In the modern manufacturing automatic and robotic welding is becoming an inevitable trend However it is difficult for automatic and robotic welding to reach high quality due to the complexity uncertainty and disturbance during welding process especially for arc welding dynamics The information acquisition and real time control of arc weld pool dynamical process during automatic or robotic welding always are perplexing problems to both the technologist in weld and scientists in automation This book presents some application researches on intelligentized methodology in arc welding process such as machine vision image processing fuzzy logical neural networks rough set intelligent control and other artificial intelligence methods for sensing modeling and intelligent control of arc welding dynamical process The studies in the book indicate that the designed vision sensing and control systems are able to partially emulate a skilled welder's intelligent behaviors observing estimating decision making and operating and show a great potential and promising prospect of artificial intelligent technologies in the welding manufacturing

Role of SRS/SBRT in Oligometastatic Disease

Michael T. Milano,Dwight E. Heron,Alina Mihaela Mihai,2020-02-13 Oligometastatic disease represents an intermediate state between the early localized disease and widespread metastatic malignancy Some patients with oligometastatic disease treated by ablative therapies to all sites of metastatic disease can achieve long disease free survival and sometimes cure Stereotactic radiosurgery SRS and stereotactic body radiation therapy SBRT are accepted treatment options for these patients achieving high rates of local control While most of the studies report outcomes of SBRT for solitary oligometastasis patients with oligometastatic disease might present with multiple concurrent lesions either in the same organ or in neighboring organs There are few studies addressing the role of SBRT in patients with multiple concurrent oligometastases Furthermore these patients likely recur either in the same organ or at distance Therefore the need for retreatment with SBRT might be required There remains a dearth of data regarding the re irradiation after prior SBRT toxicity and dose volume constraints Particularly as it related to significant improvements in systemic therapies including immunotherapies it is likely that patients with widespread metastases can become oligometastatic after systemic treatments While targeted immune therapies and SBRT are increasingly used in patients with oligometastatic disease their sequencing interaction and toxicities have not been studied and are poorly understood In this e book we discuss the state of the science of oligometastatic disease SBRT in a variety of locations and outline potential future direction of research efforts
