Dass, Rama Verma & Bhagwat S. Sharma, S Chand s Mathematics books for Classes IX and X are completely based on CCE pattern of CBSE The book for Term I covers the syllabus from April to September and the book for Term II covers the syllabus from October to March **Trigonometry** I.M. Gelfand, Mark Saul, 2012-12-06 In a sense trigonometry sits at the center of high school mathematics It originates in the study of geometry when we investigate the ratios of sides in similar right triangles or when we look at the relationship between a chord of a circle and its arc It leads to a much deeper study of periodic functions and of the so called transcendental functions which cannot be described using finite algebraic processes It also has many applications to physics astronomy and other branches of science It is a very old subject Many of the geometric results that we now state in trigonometric terms were given a purely geometric exposition by Euclid Ptolemy an early astronomer began to go beyond Euclid using the geometry of the time to construct what we now call tables of values of trigonometric functions Trigonometry is an important introduction to calculus where one studies what mathematicians call analytic properties of functions One of the goals of this book is to prepare you for a course in calculus by directing your attention away from particular values of a function to a study of the function as an object in itself This way of thinking is useful not just in calculus but in many mathematical situations So trigonometry is a part of pre calculus and is related to other pre calculus topics such as exponential and logarithmic functions and complex numbers *Aircraft Engineering Principles* Lloyd Dingle, Michael H Tooley, 2013-09-23 Aircraft Engineering Principles is the essential text for anyone studying for licensed A P or Aircraft Maintenance Engineer status The book is written to meet the requirements of JAR 66 ECAR 66 the Joint Aviation Requirement to be replaced by European Civil Aviation Regulation for all aircraft engineers within Europe

which is also being continuously harmonised with Federal Aviation Administration requirements in the USA The book covers modules 1 2 3 4 and 8 of JAR 66 ECAR 66 in full and to a depth appropriate for Aircraft Maintenance Certifying Technicians and will also be a valuable reference for those taking ab initio programmes in JAR 147 ECAR 147 and FAR 147 In addition the necessary mathematics aerodynamics and electrical principles have been included to meet the requirements of introductory Aerospace Engineering courses Numerous written and multiple choice questions are provided at the end of each chapter to aid learning
