Chapter 1

Problem 1.1

A nucleus, originally at rest, decays radioactively by emitting an electron of momentum $1.73 \text{ MeV}/c$, and at right angles to the direction of the electron a neutrino with momentum $1.00 \text{ MeV}/c$. (The MeV (million electron volt) is a unit of energy, used in modern physics, equal to $1.60 \times 10^{-6} \text{ erg}$. Correspondingly, MeV/c is a unit of linear momentum equal to $5.34 \times 10^{-17} \text{ gm-cm/sec.}$) In what direction does the nucleus recoil? What is its momentum in MeV/c ? If the mass of the residual nucleus is $3.90 \times 10^{-27} \text{ gm}$, what is its kinetic energy, in electron volts?

Place the nucleus at the origin, and suppose the electron is emitted in the positive y direction, and the neutrino in the positive x direction. Then the resultant of the electron and neutrino momenta has magnitude

$$|\mathbf{p}_{e+\nu}| = \sqrt{(1.73)^2 + 1^2} = 2 \text{ MeV}/c,$$

and its direction makes an angle

$$\theta = \tan^{-1} \frac{1.73}{1} = 60^\circ$$

with the x axis. The nucleus must acquire a momentum of equal magnitude and directed in the opposite direction. The kinetic energy of the nucleus is

$$T = \frac{p^2}{2m} = \frac{4 \text{ MeV}^2 c^{-2}}{2 \cdot 3.9 \cdot 10^{-27} \text{ gm}} \cdot \frac{1.78 \cdot 10^{-27} \text{ gm}}{1 \text{ MeV } c^{-2}} = 9.1 \text{ ev}$$

This is much smaller than the nucleus rest energy of several hundred GeV , so the non-relativistic approximation is justified.

Robust Control of Linear Systems and Nonlinear Control M. A. Kaashoek, J. H. van Schuppen, A. C. M. Ran, 2013-03-07 This volume is the second of the three volume publication containing the proceedings of the 1989 International Symposium on the Mathematical Theory of Networks and Systems MTNS 89 which was held in Amsterdam The Netherlands June 19 23 1989 The International Symposia MTNS focus attention on problems from system and control theory circuit theory and signal processing which in general require application of sophisticated mathematical tools such as from function and operator theory linear algebra and matrix theory differential and algebraic geometry The interaction between advanced mathematical methods and practical engineering problems of circuits systems and control which is typical for MTNS turns out to be most effective and is as these proceedings show a continuing source of exciting advances The second volume contains invited papers and a large selection of other symposium presentations in the vast area of robust and nonlinear control Modern developments in robust control and H_∞ theory for finite as well as for infinite dimensional systems are presented A large part of the volume is devoted to nonlinear control Special attention is paid to problems in robotics Also the general theory of nonlinear and infinite dimensional systems is discussed A couple of papers deal with problems of stochastic control and filterina vi Preface The titles of the two other volumes are Realization and Modelling in

Head Attitude Determination and Control Section National Aeronautics and Space Administration Goddard Space Flight
Center Extensive work has been done for many years in the areas of attitude determination attitude prediction and attitude
control During this time it has been difficult to obtain reference material that provided a comprehensive overview of attitude
support activities This lack of reference material has made it difficult for those not intimately involved in attitude functions to
become acquainted with the ideas and activities which are essential to understanding the various aspects of spacecraft
attitude support As a result I felt the need for a document which could be used by a variety of persons to obtain an
understanding of the work which has been done in support of spacecraft attitude objectives It is believed that this book
prepared by the Computer Sciences Corporation under the able direction of Dr James Wertz provides this type of reference
This book can serve as a reference for individuals involved in mission planning attitude determination and attitude dynamics
an introductory textbook for students and professionals starting in this field an information source for experimenters or
others involved in spacecraft related work who need information on spacecraft orientation and how it is determined but who
have neither the time nor the resources to pursue the varied literature on this subject and a tool for encouraging those who
could expand this discipline to do so because much remains to be done to satisfy future needs *NASA Technical*

Clark, E.H. Dowell, 2004-09-30 In this new edition the fundamental material on classical linear aeroelasticity has been revised
Also new material has been added describing recent results on the research frontiers dealing with nonlinear aeroelasticity as
well as major advances in the modelling of unsteady aerodynamic flows using the methods of computational fluid dynamics
and reduced order modeling techniques New chapters on aeroelasticity in turbomachinery and aeroelasticity and the latter
chapters for a more advanced course a graduate seminar or as a reference source for an entrance to the research literature

A Modern Course in Aeroelasticity Howard C. Curtiss Jr., Robert H. Scanlan, Fernando Sisto, 2013-11-11 A reader who
achieves a substantial command of the material contained in this book should be able to read with understanding most of the
literature in the field Possible exceptions may be certain special aspects of the subject such as the aeroelasticity of plates and
shells or the use of electronic feedback control to modify aeroelastic behavior The first author has considered the former
topic in a separate volume The latter topic is also deserving of a separate volume In the first portion of the book the basic
physical phenomena of divergence control surface effectiveness flutter and gust response of aeronautical vehicles are treated
As an indication of the expanding scope of the field representative examples are also drawn from the non aeronautical
literature To aid the student who is encountering these phenomena for the first time each is introduced in the context of a

simple physical model and then reconsidered systematically in more complicated models using more sophisticated mathematics **IRE Transactions on Aeronautical and Navigational Electronics** ,1963 **Catalogue for the Academic Year** Naval Postgraduate School (U.S.),1970 *Proceedings of the ...
