

QUESTION 6: MANUFACTURING**(55 marks; 30 minutes)****6.1 BRIAN'S BRELLIES**

Brian Jonas is the owner of Brian's Brellies, a business that manufactures umbrellas. The financial year ends on 31 July 2014.

REQUIRED:

- 6.1.1 Refer to Information C: Calculate the direct labour cost. (5)
- 6.1.2 Refer to Information D: Prepare the correct note for factory overhead cost. (19)
- 6.1.3 Prepare the Production Cost Statement for the year ended 31 July 2014. (10)

INFORMATION:

A.	STOCK BALANCES	31 JULY 2014	1 AUGUST 2013
	Raw material stock	R124 400	R98 780
	Work-in-process stock	R42 600	R37 600
	Indirect material	R3 600	R4 400

- B. Raw material issued to the factory for production: R623 700
- C. Three workers are employed in production. They each work 1 920 hours normal time per year at R95 per hour. In December 2013, each factory worker received a bonus of 12% of his annual earnings.
- D. The bookkeeper presented the following factory overhead cost calculation:

Sundry factory expenses	30 975
Indirect material	52 200
Rent expense	117 000
Advertising	10 500
Insurance	16 640
Salary of factory foreman	97 150
Water and electricity	20 010
TOTAL	344 475

The following errors were noticed:

- Stocks of factory indirect materials were not taken into account in calculating indirect materials used.
- The amount for rent expense is the total amount paid. Rent should be split between the factory, sales and administration sections in the ratio of 5 : 2 : 1.
- The amount for insurance is the total amount paid. This includes the August 2014 premium. Only 75% of this expense relates to the factory. There was no increase in monthly premiums.
- The factory foreman was on paid leave in July 2014. His salary for July 2014 was not processed. The factory foreman received a R900 monthly increase in his salary with effect from 1 June 2014.
- 60% of the water and electricity cost was allocated to the factory whereas it should have been 80%.

Mineral Resources Manuel Bustillo Revuelta, 2017-08-23 This comprehensive textbook covers all major topics related to the utilization of mineral resources for human activities. It begins with general concepts like definitions of mineral resources, mineral resources and humans recycling mineral resources, distribution of minerals resources across Earth and international standards in mining among others. Then it turns to a classification of mineral resources covering the main types from a geological standpoint. The exploration of mineral resources is also treated including geophysical methods of exploration, borehole geophysical logging, geochemical methods, drilling methods and mineral deposit models in exploration. Further, the book addresses the evaluation of mineral resources from sampling techniques to the economic evaluation of mining projects, i.e. types and density of sampling, mean grade definition and calculation, Sichel's estimator, evaluation methods, classical and geostatistical economic evaluation, NPV, IRR and PP estimation of risk and software for evaluating mineral resources. It subsequently describes key mineral resource exploitation methods, open pit and underground mining and the mineral processing required to obtain saleable products, crushing, grinding, sizing, ore separation and concentrate dewatering, also with some text devoted to tailings dams. Lastly, the book discusses the environmental impact of mining, covering all the aspects of this very important topic from the description of diverse impacts to the environmental impact assessment (EIA) which is essential in modern mining projects.

, *Constitutions of Value* Isabel Feichtner, Geoff Gordon, 2023-01-19 Gathering an interdisciplinary range of cutting edge scholars, this book addresses legal constitutions of value. Global value production and transnational value practices that rely on exploitation and extraction have left us with toxic commons and a damaged planet. Against this situation, the book examines law's fundamental role in institutions of value production and valuation. Utilizing pathbreaking theoretical approaches, it problematizes mainstream efforts to redeem institutions of value production by recoupling them with progressive values. Aiming beyond radical critique, the book opens up the possibility of imagining and enacting new and different value practices. This wide-ranging and accessible book will appeal to international lawyers, socio-legal scholars, those working at the intersections of law and economy and others in politics, economics, environmental studies and elsewhere who

are concerned with rethinking our current ideas of what has value what does not and whether and how value may be revalued The Open Access version of this book available at www.taylorfrancis.com has been made available under a Creative Commons Attribution Non Commercial No Derivatives 4.0 license *Evidence Matters*, 2014 [Presenting Data Effectively](#) Stephanie D. Buehner,2014-08-06 The problem of how humans and other intelligent systems construct causal representations from non causal perceptual evidence has occupied scholars in cognitive science for many decades Most contemporary approaches agree with David Hume that patterns of covariation between two events of interest are the critical input to the causal induction engine irrespective of whether this induction is believed to be grounded in the formation of associations Shanks Dickinson 1987 rule based evaluation White 2004 appraisal of causal powers Cheng 1997 or construction of Bayesian Causal Networks Pearl 2000 Recent research however has repeatedly demonstrated that an exclusive focus on covariation while neglecting contiguity another of Hume s cues results in ecologically invalid models of causal inference Temporal spacing order variability predictability and patterning all have profound influence on the type of causal representation that is constructed The influence of time upon causal representations could be seen as a bottom up constraint though current bottom up models cannot account for the full spectrum of effects However causal representations in turn also constrain the perception of time Put simply two causally related events appear closer in subjective time than two equidistant unrelated events This reversal of Hume s conjecture referred to as Causal Binding Buehner Humphreys 2009 is a top down constraint and suggests that our representations of time and causality are mutually influencing one another At present the theoretical implications of this phenomenon are not yet fully understood Some accounts link it exclusively to human motor planning appealing to mechanisms of cross modal temporal adaptation or forward learning models of motor control However recent demonstrations of causal binding in the absence of human action and analogous binding effects in the visual spatial domain challenge such accounts in favour of Bayesian Evidence Integration This Research Topic reviews and further explores the nature of the mutual influence between time and causality how causal knowledge is constructed in the context of time and how it in turn shapes and alters our perception of time We draw together literatures from the perception and cognitive science as well as experimental and theoretical papers Contributions investigate the neural bases of binding and causal learning perception methodological advances and functional implications of causal learning and perception in real time
