a computing expertise If yes then keep reading Linux has been well known as one of the most powerful operating systems in the world of cybersecurity and coding Among its various components Kali Linux is one of the distributions which can be treated like a boon for the ethical hackers and the IT people However everything comes with a number of problems In this world of today people have excessive trust in Kali Linux capabilities by default only As the end result most of the users are not paying attention to the various manual aspects of the Linux security It is true that with Linux you can automate many of your tasks However it also requires some manual touch for keeping everything with the pace This fact even becomes more evident when it comes to the concept of security Though an operating system might automate all your tasks it is your task to be anxious always You are required to keep a close eye on the settings of our application and various other details When you have a well configured system of Kali Linux it might turn out to be the most difficult thing to crack However most of the users of Kali Linux do not have profound knowledge about what is required for keeping their whole systems locked up In case you start using a brand new application try to pay very close attention to the details of its configuration Running the application with the same example settings and then using it is not the ideal option It is not at all recommended Some of the developers in the past also put decoy settings in the applications for making sure that the applications are prevented from running This was a great way for ensuring that all the users have checked out the file of configuration of the application When it comes to permissions it forms an essential part of Linux It is very important for a user to clearly understand how each and every permission function along with the implications of the various components of the OS In case you are shifting from Windows to Linux the generalized concept might be a bit different and awkward for you The general rule of Kali Linux is that you are not supposed to use root for your daily work This might sound like a bit of a surprise for all the Windows users in which the operating system handles the various permissions which are critical in nature in a different way It is surely an inconvenient function where you are required to type a password each and every time when you want the machine to execute a function However it is practical as well as it will surely help in preventing some serious security problem of your machine in the future In this book you will learn more about Basic Linux commandsLinux InstallationFile SystemBasic Shell ProgrammingWhat to Do Next with Linux Basic kali Linux toolsCommand Syntax PatternsLinux Files and DirectoriesLinux File System SearchingUser and Group ManagementCommands and Functions for the BeginnerUsing Linux Text EditorsexercisesBuilding ScriptsSecuring Your Linux ServerGNU UtilitiesControl Privileged User AND MORE What are you waiting for Don t wait anymore press the buy now button and get started      *The Complete Guide to Linux System Administration* Nicholas Wells,2005
