Quick Reference Guide

SCPI Command Summary

The following conventions are used for SCPI command syntax for remote interface programming:

- Square brackets [] indicate optional keywords or parameters.
- Braces { } enclose parameter choices within a command string.
- Triangle brackets < > enclose parameters for which you must substitute a value.
- A vertical bar | separates multiple parameter choices.

Rules for Using a Channel List

Many of the SCPI commands for the 34870A include a *scan_list* or *ch_list* parameter which allow you to specify one or more channels. The channel number has the form (a**list**), where **a** is the slot number (100, 200, or 300) and **list** is the channel number. You can specify a single channel, multiple channels, or a range of channels as shown below.

- The following command configures a scan list to include only channel 10 on the module in slot 200.

```
ROOT:SCAN (40010)
```

- The following command configures a scan list to include multiple channels on the module in slot 200. The scan list now contains only channels 10, 12, and 15 (the scan list is redifined each time you send a new ROOT:SCAN command).

```
ROOT:SCAN (40010,12,15)
```

- The following command configures a scan list to include a range of channels. When you specify a range of channels, the range may contain invalid channels (they are ignored), but the first and last channel in the range must be valid. The scan list now contains channels 5 through 10 (slot 100) and channel 15 (slot 200).

```
ROOT:SCAN (40105:110,15)
```
