

One method of measuring the rate of transpiration is to record how long it takes a red stain to travel up the xylem tissue in a celery stalk that still has its leaves attached.

Plan an investigation to determine the effect of humidity on the rate of movement of water through leafy twigs.

- test at different humidities: 0%, 20%, 40%, 60%, 80%.
- control: temperature, wind speed, light intensity, carbon dioxide levels, leaf surface area.
- measure distance moved by the stain up the stem in 10 minutes
- divide the distance moved by time taken to get rates to compare
- repeat 5 times at each humidity level
- wear gloves when working with the stain
