Henke, Benjamin Sims, 2020-10-13 An investigation of the causes and consequences of the strange ambivalent and increasingly central role of infrastructure repair in modern life Infrastructures communication food transportation energy and information are all around us and their enduring function and influence depend on the constant work of repair In this book Christopher Henke and Benjamin Sims explore the causes and consequences of the strange ambivalent and increasingly central role of infrastructure repair in modern life Henke and Sims offer examples from local to global to investigate not only the role of repair in maintaining infrastructures themselves but also the social and political orders that are created and

sustained through them Repair can encompass not only the kind of work we most commonly associate with the term but also any set of practices aimed at restoring a sense of normalcy or credibility to the places and institutions we inhabit in everyday life From cases as diverse as the repair of building systems on a university campus a conflict over retrofitting a bridge while protecting murals painted on it and the global challenge posed by climate change Henke and Sims assemble a range of examples to illustrate key conceptual points about the role of repair They show that repair is an essential if often overlooked aspect of understanding the broader impact and politics of infrastructures Understanding repair helps us better understand infrastructures and the scope of their influence on our lives     Ergonomics In Design Francisco Rebelo and Zihao

**Schools as Protection?** Bjorn H. Nordtveit, 2016-04-20 In 1900 the Swedish social theorist Ellen Key launched the idea of a Century of the Child Recent media reports from shooting and racial violence in the US to the latest news from ISIS dominated areas provide a darker vision it is certainly not a time for children it is a time during which children's wellbeing is being the cause of worry This book is about schools and protection of children and proposes ways to ensure the

minimum standards of safety in schools The issue of protection is not only important in specific conflict settings but also more and more in mainstream schools in the Western context Therefore the book is not focusing on a specific geographic area but analyzing various contexts of adversity including those affected by poverty high incidence of HIV AIDS as well as conflict and post conflict affected areas It also illustrates the effects of such contexts non enrollment of children or early dropout from school various forms of abuse and bullying at home and school increased incidence of child marriage abusive child labor and in some cases the worst forms of child labor The school emerges as an institution that could play a stronger role in protection of children and that also could provide better support in the transition from childhood to work and marriage

**Cancer-Associated Defects in the DNA Damage Response: Drivers for Malignant Transformation and Potential Therapeutic Targets** Marcel van Vugt,H. Christian Reinhardt,2016-10-17

For this eBook and the associated Research Topic in Frontiers in Genetics entitled Cancer associated defects in the DNA damage response drivers for malignant transformation and potential therapeutic targets we have selected 10 papers that each discusses important yet distinct aspects of the response to DNA damage in normal cells and cancer cells Using an evolutionary conserved signaling network called the DNA damage response DDR cells maintain the integrity of their genome and thus safeguard cellular functioning and the ability to create viably progeny Initially the DDR appeared to consist of few linear kinase driven pathways However research over the past decades in model organisms as well as in the human system has revealed that the DDR is a complex signaling network wired by multiple parallel pathways and displaying extensive crosstalk Besides phosphorylation multiple other post translational modifications including ubiquitination and sumoylation are involved to achieve chromatin remodeling and initiation of DNA repair Also rather than being a cell intrinsic phenomenon we increasingly appreciate that cell cell communication is involved The recognition and repair of DNA damage is essential to maintain normal physiology Multiple pathological conditions have been attributed to defective DNA repair most notably accelerated aging neurodegeneration and cancer In the context of cancer through repair of DNA damage or elimination of irreparably damaged cells the DDR clearly has a tumor suppressive role Indeed many tumor cells show partially inactivated DDR signaling which allows proliferation in the context of DNA damage inducing oncogenes Simultaneously loss of specific DDR signaling nodes creates a specific dependence of tumor cells on their remaining DDR components and thus creates therapeutic opportunities Especially in the context of cancer treatment numerous targeted agents are under investigation either to potentiate the cytotoxic effects of chemo radiotherapy or to induce synthetic lethality with cancer specific alterations with the treatment of BRCA1 2 mutant cancers with PARP1 inhibitors as a prototype example We have selected four review articles that provide insight into the key components and the wiring of the DDR and DNA repair Torgovnick and Schumacher review the involvement of DNA repair in the initiation and treatment of cancer Brinkmann et al describe the involvement of ubiquitination in DNA damage signaling and Jaiswal and Lindqvist discuss how cell extrinsic signaling participates in communication of DNA damage to neighboring cells In addition Shatneyeva and colleagues review the

connection between the cellular response to DNA damage and escape from immune surveillance Concerning the therapeutic application of targeting the DDR and DNA repair three articles were included Krajewska and van Vugt review the wiring of homologous recombination and how this offers therapeutic opportunities Additionally Knittel and colleagues describe how genetic loss of the central DDR component ATM in chronic lymphocytic leukemia can be exploited therapeutically by targeting certain parallel DNA repair pathways Syljuasen and colleagues report on how targeting of the DDR can be used as a therapeutic strategy in lung cancer Finally three chapters describe newly identified regulators of the cellular response to DNA damage Von Morgen et al describe the R2TP complex Lezzi and Fanciluuli review the involvement of Che 1 AATF in the DDR and Ohms and co authors describe how retrotransposons are at the basis of increased genomic instability Altogether these articles describe how defective responses to DNA damage underlie disease and especially in the context of cancer can be exploited to better treat disease

**Regulation of Organelle and Cell Compartment Signaling** Ralph A.

Bradshaw,Edward A. Dennis,2011-04-12 Cell signaling which is also often referred to as signal transduction or in more specialized cases transmembrane signaling is the process by which cells communicate with their environment and respond temporally to external cues that they sense there All cells have the capacity to achieve this to some degree albeit with a wide variation in purpose mechanism and response At the same time there is a remarkable degree of similarity over quite a range of species particularly in the eukaryotic kingdom and comparative physiology has been a useful tool in the development of this field The central importance of this general phenomenon sensing of external stimuli by cells has been appreciated for a long time but it has truly become a dominant part of cell and molecular biology research in the past three decades in part because a description of the dynamic responses of cells to external stimuli is in essence a description of the life process itself This approach lies at the core of the developing fields of proteomics and metabolomics and its importance to human and animal health is already plainly evident Provided by publisher
