

PhET Online Lab, Geometric Optics, Part 1

I. Introduction

In this guided inquiry activity, you will investigate how an image is formed by four different optical instruments: a convex lens, a concave lens, a convex mirror, and a concave mirror. By the end of this lab, you should be able to (1) explain how the characteristics of the image change as the object is brought closer to each of the lenses and mirrors, (2) explain the similarities and differences between the image formation for each of the lenses and mirrors, and (3) explain the meaning of the points F and $2F$ for the convex lens and concave mirrors.

You will use one of the simulations from PhET Interactive Simulations. The simulation is called Geometric Optics (GEOMLab). The link for the simulation is: <https://phet.colorado.edu/en/simulation/geometric-optics>.

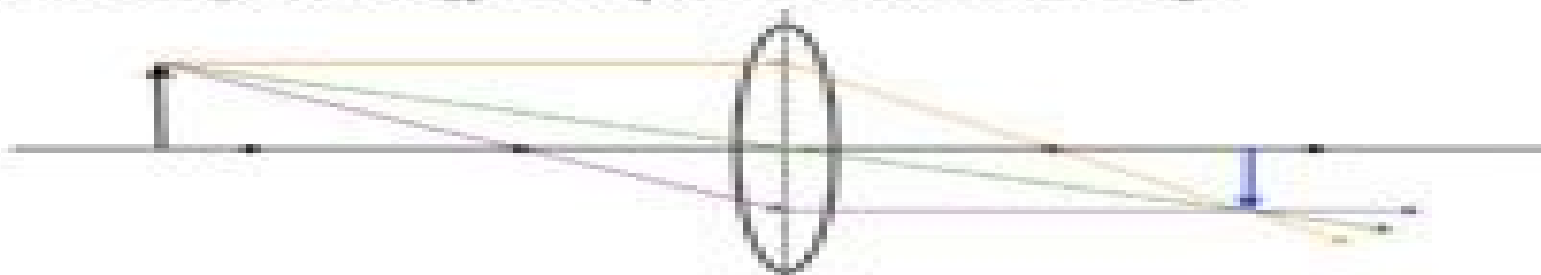

II. Convex Lens and Concave Mirror

To begin, click on the Lens window. Next, click on the PhET logo in the bottom right hand corner of the simulation and then click Options. When the Options window opens, check the red "off points" box and change the focal length control from infinity to 60 cm. Close the Options window.

Next, on the simulation window (1) change Rays from Marginal to Principal, (2) make the lens diameter 200 cm and (3) check the off Points and Labels boxes. Leave the focal length at 60 cm and the Second Point box unchecked.

Choose an object from the upper left drop down menu. Do not choose the light.

(1) On the diagram above label the following:

- | | |
|---------------------|---|
| a) the optical axis | e) the focal length |
| b) the object | f) the points that are two focal lengths away from the lens |
| c) the image | g) the object distance |
| d) the focal points | h) the image distance |

(2) Move the object back and forth on the optical axis. Where does the convex lens form an image?

Learning With Escape Rooms in Higher Education Online Environments Santamaría Urbieta, Alexandra, Alcalde Peñalver, Elena, 2023-02-10 Teachers professors and educational professionals have the opportunity to create new challenging significant and interactive learning experiences for today's students. Escape rooms are growing in popularity as they provide numerous benefits and opportunities for learning; however, the use of escape rooms in higher education is not always taken seriously. Learning With Escape Rooms in Higher Education Online Environments proves that it is possible to take escape rooms to higher education with great results for both teachers and students by presenting different escape room proposals that are explained in detail with the instructions and materials used so that any teacher could replicate it in their subject. Covering key topics such as online learning, student learning, and computer science, this reference work is ideal for principals, industry professionals, researchers, scholars, practitioners, academicians, instructors, and students. *Geometric Optics*

Antonio Romano, 2009-10-10 This book is unique in the literature; it provides readers with the mathematical background needed to design many of the optical combinations that are used in astronomical telescopes and cameras. The results presented in the work were obtained by using a different approach to third-order aberration theory as well as the extensive use of the software package Mathematica. Replete with worked-out examples and exercises, *Geometric Optics* is an excellent reference for advanced graduate students, researchers, and practitioners in applied mathematics, engineering, astronomy, and astronomical optics. The work may be used as a supplementary textbook for graduate-level courses in astronomical optics, optical design, optical engineering, programming with Mathematica, or geometric optics. **Geometric Optics** Allen Nussbaum, 1968

Teaching about Geometric Optics Jane Bray Nelson, Jim Nelson, 2020 **Geometric Optics**, 1987 *Introduction to Geometrical Optics* Milton Katz, 2002 This book is the culmination of twenty-five years of teaching Geometrical Optics. The volume is organized such that the single spherical refracting surface is the basic optical element. Spherical mirrors are treated as special cases of refraction with the same applicable equations. Thin lens equations follow as combinations of spherical refracting surfaces, while the cardinal points of the thick lens make it equivalent to a thin lens. Ultimately, one set of vergence equations are applicable to all these elements. The chapters are devoted to in-depth treatments of stops, pupils, and ports, magnifiers, microscopes, telescopes, and camera lenses, ophthalmic instruments, resolving power, and MTF, trigonometric ray tracing, and chromatic and monochromatic aberrations. There are over 100 worked examples, 400 homework problems, and 400 illustrations. First published in 1994 by Penumbra Publishing Co. **Geometric Optics** J. Warren Blaker, 1971

Problems And Solutions On Optics (Second Edition) Swee Cheng Lim, Choy Heng Lai, Leong-chuan Kwek, 2019-09-24 This volume is a compilation of carefully selected questions at the PhD qualifying exam level, including many actual questions from Columbia University, University of Chicago, MIT, State University of New York at Buffalo, Princeton University, University of Wisconsin, and the University of California at Berkeley over a twenty-year period. Topics covered in this book include

geometrical optics quantum optics and wave optics This latest edition has been updated with more problems and solutions bringing the total to over 200 problems The original problems have been modernized and outdated questions removed placing emphasis on those that rely on calculations The problems range from fundamental to advanced in a wide range of topics on optics easily enhancing the student's knowledge through workable exercises Simple to solve problems play a useful role as a first check of the student's level of knowledge whereas difficult problems will challenge the student's capacity on finding the solutions

Near the Horizon Hendrik Wolter Broer,2016 **Geometrical Optics** W. T. Welford,1962 **A Treatise on Geometrical Optics** Robert Samuel Heath,1887

Geometrical Optics H.G. Zimmer,2013-03-08 Geometrical optics is no longer fashionable Research workers do not expect significant new discoveries to be made in this field of classical physics Teachers avoid the subject because its use for many generations in arid mathematical exercises has robbed it of all freshness and stimulus with the result that it no longer seems relevant to a modern physics course There remains and perhaps this has grown in recent year the technical significance of geometrical optics It provides the basis for the design of optical instruments for use in everyday life as well as for scientific and industrial purposes This small book is intended to treat two aspects of the subject the laws of geometrical optics and their application to the design of optical instruments The theory is not based on Snell s law of refraction but on a conservation law for the radiated energy The subject can then be treated in a manner appropriate to contemporary physics auxiliary geometrical parameters become unnecessary and the singularities resulting from their use vanish The laws of geometrical optics can be formulated much more simply and their physical significance is revealed more clearly I have tried to present the material in a form satisfactory both to teachers and to workers in the technical applications of optics The content has thus been deliberately kept within the limits of a pocket book

A Treatise on Geometrical Optics Robert Alfred Herman,1900 **The Geometrical Optics Workbook** David S. Loshin,2015-01-28 This workbook is designed to

supplement optics textbooks and covers all the traditional topics of geometrical optics Terms equations definitions and concepts are discussed briefly and explained through a series of problems that are worked out in a step by step manner which simplifies the problem solving process Additional practice problems are provided at the end of each chapter An indispensable tool when studying for the state and National Boards An ideal supplement to optics textbooks Covers the traditional topics of geometrical optics
