Geometry

MODEL PROBLEMS *continued*

A designer is trying to ensure that levels 1 and 2 are parallel in a gutter. If he is sketching out a diagram to the factory, how might he do so?

SOLUTION

Construct level 1 using a straightedge.

The designer can use a postulate concerning corresponding angles and parallel lines, as well as a protractor and straightedge. Use the straightedge—a ruler in this case—to draw a line segment that represents level 1.

Construct an angle using a protractor.

Place the straightedge to the left of level 1 and measure the angle with a protractor. This particular angle is 120°.

Construct a corresponding angle using a protractor.

Move the protractor down along the straightedge, and measure a corresponding angle of 120°.

Construct level 2 using the corresponding angles postulate converse.

Using a straightedge, construct level 2 at the 120° mark on the protractor. Since the corresponding angles are congruent, the levels are parallel.
