### QUESTION 3

- 3.1 Read the passage below and answer the questions that follow.

Peat lands are special wetlands that play a very important role in ecology. A peat land, of approximately 6 000 years old, near Mafeking is almost destroyed because of excessive extraction of water from the nearby Molopo river. The water is extracted for human consumption.

Peat lands like the one near Mafeking is exceptional and play an important role in storing water as well as preventing climate changes.

Dr Phil-Louis Grundling said that carbon that is 'held' or 'stored' by peat lands combats climate change because it decreases the amount of carbon in the atmosphere.

Peat lands trap about one third of the world's carbon. Approximately 50% of wetlands worldwide are peat lands. However in South Africa about 10% of the wetlands are peat lands.

Grundling explained that peat lands can hold about 1 000 times its own mass in water. This replenishes the water table and is the source that keeps streams flowing. The 'sponge effect' of the peat also makes it possible to store water that is then released during dry seasons.

Dr Grundling said that it might be too late to restore the peat land near Mafeking but it might be possible to restore some parts of it if more water is supplied to this peat land.

The result of this destruction is depletion of the water table. The habitat of numerous fish and frog species that lived in this peat land was also destroyed.

From: Beeld: 24 September 2016.

- 3.1.1 Give TWO other reasons (not mentioned in the passage) that can lead to the destruction of wetlands. (2)
- 3.1.2 Discuss reasons from the passage regarding the importance of these specific wetlands for the environment. (4)
- 3.1.3 Suggest a way in which this peat land near Mafeking can be restored. (2)

**Omega Principle** Paul Greenberg, 2018-07-10 By the bestselling author of Four Fish and American Catch an eye opening  
investigation of the history science and business behind omega 3 fatty acids the miracle compound whose story is intertwined  
with human health and the future of our planet Omega 3 fatty acids have long been celebrated by doctors and dieticians as  
key to a healthy heart and a sharper brain In the last few decades that promise has been encapsulated in one of America's  
most popular dietary supplements Omega 3s are today a multi billion dollar business and sales are still growing apace even  
as recent medical studies caution that the promise of omega 3s may not be what it first appeared But a closer look at the  
omega 3 sensation reveals something much deeper and more troubling The miracle pill is only the latest product of the  
reduction industry a vast global endeavor that over the last century has boiled down trillions of pounds of marine life into  
animal feed fertilizer margarine and dietary supplements The creatures that are the victims of that industry seem  
insignificant to the untrained eye but turn out to be essential to the survival of whales penguins and fish of all kinds including  
many that we love to eat Behind these tiny molecules is a big story of the push and pull of science and business of the fate of  
our oceans in a human dominated age of the explosion of land food at the expense of healthier and more sustainable seafood  
of the human quest for health and long life at all costs James Beard Award winning author Paul Greenberg probes the rich  
and surprising history of omega 3s from the dawn of complex life when these compounds were first formed to human  
prehistory when the discovery of seafood may have produced major cognitive leaps for our species and on to the modern era  
when omega 3s may point the way to a bold new direction for our food system With wit and boundless curiosity Greenberg

brings us along on his travels from Peru to Antarctica from the Canary Islands to the Amalfi Coast to reveal firsthand the practice and repercussions of our unbalanced way of eating Rigorously reported and winningly told The Omega Principle is a powerful argument for a more deliberate and forward thinking relationship to the food we eat and the oceans that sustain us
