Variations on Process Metaphysics Alexander Haitos, Helmut Maaßen, 2020-04-16 This book collects several essays on diverse aspects of Alfred North Whitehead's philosophy. Ranging from comparative and historical studies to explorations of contemporary influence to possibilities for transforming future inquiry, the topics covered here first and foremost point to the relevance of Whitehead's philosophy for our time. From this core, the essays in this volume highlight a range of issues to which process philosophy speaks profitably. These include philosophical questions surrounding motion, the notion of life and aesthetics, as well as the conjunction of process philosophy with political science and with neuroscience. **Encyclopedia of Early Modern Philosophy and the Sciences** Dana Jalobeanu, Charles T. Wolfe, 2022-08-27 This Encyclopedia offers a fresh, integrated and creative perspective on the formation and foundations of philosophy and science in European modernity. Combining careful contextual reconstruction with arguments from traditional philosophy, the book examines methodological dimensions, breaks down traditional oppositions such as rationalism vs. empiricism, calls attention to gender issues to insiders and outsiders, minor figures in philosophy and underground movements among many other topics. In addition, and in line with important recent transformations in the fields of history of science and early modern philosophy, the volume recognizes the specificity and significance of early modern science and discusses important developments, including issues of historiography such as historical epistemology, the interplay between the material culture and modes of knowledge, expert knowledge and craft knowledge. This book stands at the crossroads of different disciplines and combines their approaches, particularly the history of science, the history of philosophy, contemporary philosophy of science and intellectual and cultural history. It brings together over 100 philosophers, historians of science, historians of mathematics and medicine, offering a comprehensive view of early modern philosophy and the sciences. It combines and discusses recent results from two very active fields: early modern philosophy and the history of early modern science. Multilingualism in Mathematics Education in Africa Anthony A. Essien,2023-12-14 This book brings together the first book collection of African research in mathematics education in multilingual societies and chronicles current research in different linguistic contexts across the African continent including Algeria Namibia Malawi Morocco Rwanda South Africa on issues of multilingualism in mathematics education but more importantly it foregrounds pertinent issues for future research With many of the authors building on earlier path breaking African research the book is a unique contribution of careful thinking through how linguistic diversity and multilingualism manifest in ways that differ from one geopolitical context to another This volume is an important contribution to the growing recognition of multilingualism as the global linguistic dispensation in mathematics education It is an invitation to how we might as an international community where more and more multilingualism is the norm rather than an exception pay more attention to the multilingual agency and capabilities of both students and teachers in order to better harness the epistemic potential of multiple languages in contexts of language diversity in mathematics education **Learning Mathematics** Prof Leone Burton,Leone Burton,2012-10-12 Learning

Mathematics brings together a collection of interrelated and forward looking chapters by internationally recognized experts that explores changes in the theories and practices of learning and teaching mathematics The authors reject a traditional transmission view of the teaching of mathematics which has proved so ineffective for learning In its place they offer information gathered from research and from practice about effects on the learners seeking to create and negotiate meaning Learners are presented as actively attempting to make sense of the mathematics they encounter and learners teachers and researchers are offered examples of how such sense making activities incorporated into mathematics classrooms impact on coming to know The book celebrates both diversity in the range of different perspectives contributions and topics and unity in the linking chapters and themes It will be fascinating reading for those mathematics educators who are eager to engage with a socio cultural perspective in order to better understand the complexity of learning mathematics **The Arithmetic**
