Self-Organized Quantum Dots for Memories Tobias Nowozin,2013-10-01 Today s semiconductor memory market is divided between two types of memory DRAM and Flash Each has its own advantages and disadvantages While DRAM is fast but volatile Flash is non volatile but slow A memory system based on self organized quantum dots QDs as storage node could combine the advantages of modern DRAM and Flash thus merging the latter s non volatility with very fast write times This thesis investigates the electronic properties of and carrier dynamics in self organized quantum dots by means of time resolved capacitance spectroscopy and time resolved current measurements The first aim is to study the localization energy of various QD systems in order to assess the potential of increasing the storage time in QDs to non volatility Surprisingly it is found that the major impact of carrier capture cross sections of QDs is to influence and at times counterbalance carrier storage in addition to the localization energy The second aim is to study the coupling between a layer of self organized QDs and a two dimensional hole gas 2DHG which is relevant for the read out process in memory systems The investigation yields the discovery of the many particle ground states in the QD ensemble In addition to its technological relevance the thesis also offers new insights into the fascinating field of nanostructure physics **Nanodevices for Integrated Circuit Design**

Suman Lata Tripathi,Abhishek Kumar,K. Srinivasa Rao,Prasanth R. Mudimela,2023-10-18 NANODEVICES FOR INTEGRATED CIRCUIT DESIGN Nanodevices are an integral part of many of the technologies that we use every day It is a constantly changing and evolving area with new materials processes and applications coming online almost daily Increasing demand for smart and intelligent devices in human life with better sensing communication and signal processing is increasingly pushing researchers and designers towards future design challenges based upon internet of things IoT applications Several types of research have been done at the level of solid state devices circuits and materials to optimize system performance with low power consumption For suitable IoT based systems there are some key areas such as the design of energy storage devices energy harvesters novel low power high speed devices and circuits Uses of new materials for different purposes such as semiconductors metals and insulators in different parts of devices circuits and energy sources also play a significant role in smart applications of such systems Emerging techniques like machine learning and artificial intelligence are also becoming a part of the latest developments in an electronic device and circuit design This groundbreaking new book will among other things aid developing countries in updating their semiconductor industries in terms of IC design and manufacturing to avoid dependency on other countries Likewise as an introduction to the area for the new hire or student and as a reference for the veteran engineer in the field it will be helpful for more developed countries in

their pursuit of better IC design It is a must have for any engineer scientist or other industry professional working in this area
