Manual Carrier Marcombo:

Manual de Calefacción Lluís Jutglar i Banyeras, Ferroli, Ángel Luis Miranda Barreras, 2011-04 Esta obra constituye un manual completo para el estudio y el proyecto de las instalaciones de calefacción desde una perspectiva eminentemente práctica sin olvidar el rigor y la necesidad de fundamentar los principios de esta apasionante y necesaria técnica de ingeniería. Para ello los autores han contado con el asesoramiento inestimable de la empresa Ferroli que ha puesto a su disposición todos los medios para que la perspectiva práctica sea realista y actual. La obra consta de seis partes: Teoría, Equipamiento, Aplicaciones, Instalaciones, Respeto al medio ambiente y Anexos. En la parte I Teoría se exponen los principios de psicrometría, las condiciones de bienestar, los principios generales de la calefacción y el agua caliente sanitaria y como tema fundamental el cálculo de la carga térmica de calefacción. Se dedica un capítulo monográfico al estudio de las condensaciones. La parte II Equipamiento se dedica al importante y fundamental estudio de las calderas y de los elementos que nos permitirán construir el sistema de calefacción: tuberías, conductos, bombas y ventiladores. Se dedica una importancia especial al estudio de los emisores, intercambiadores de calor y acumuladores por ser partes fundamentales de una instalación de calefacción. La parte III Aplicaciones es el objetivo principal de la obra. Se estudian los sistemas de calefacción primero de una forma general y después centrada en los sistemas: todo agua, todo aire y calefacción eléctrica. Es evidente que se dedica una atención preferente a los sistemas de alta y baja entalpía que son los más habituales en las instalaciones de calefacción. Se termina esta parte con un estudio de los sistemas de ahorro de energía y de contabilidad energética tan importantes en este ambiente actual de subida constante del precio de los combustibles habituales de los sistemas de calefacción. La parte IV Instalaciones se dedica a la sala de máquinas y calderas, chimeneas y conductos de humos, sistema eléctrico y aparillaje, elementos y sistemas de control, ruido y vibraciones, tratamiento y calidad del agua y la forma de prevenir la legionela. La parte V Respeto al medio ambiente está dedicada a las técnicas que se consideran más respetuosas con el medio ambiente. Se estudian las energías renovables: la energía solar, la energía geotérmica y la biomasa. La parte VI está constituida por una serie de anexos. Se ha incluido un formulario que permite al lector apresurado ir directamente a la expresión que necesita. Aquí debemos advertir que la fórmula no debe sacarse del contexto del capítulo por lo que sólo es aconsejable su consulta si se conoce muy bien el tema referenciado. También se incluyen una serie de consejos prácticos muy generales que están relacionados con lo que el ingeniero llama el buen arte en este caso aplicado a las instalaciones de calefacción. Hay que destacar que la obra contiene numerosos ejercicios y ejemplos para un correcto seguimiento de las explicaciones, así como numerosas tablas y datos prácticos para facilitar el cálculo del proyecto de calefacción. El lector está ante una obra nueva y actual. Se abordan aspectos de tremenda actualidad tales como las instalaciones de agua caliente de baja temperatura con modernas calderas de alta eficiencia, así como las instalaciones solares geotérmicas y de biomasa. *Manual técnico de refrigerantes* Ángel Luis Miranda Barreras, 2013-07-01 Este es un libro de gases fluorados que evita las complicaciones técnicas innecesarias. Está

pensado para un público con conocimiento medio de la materia. Se presenta una aproximación a la temática general de los fluidos frigoríficos así como una colección de fichas con los datos técnicos más importantes de todos los utilizados sin pretender que la información sea exhaustiva. No aparecen los CFC porque están prohibidos pero sí los HCFC debido a que hasta finales del 2014 pueden utilizarse regenerados o recuperados. A partir de esta fecha también están prohibidos. Hay un capítulo divulgativo exclusivo para el uso de un refrigerante industrial bueno pero con problemas de seguridad. En un anexo se han incluido las tablas de propiedades físicas y termodinámicas tanto del vapor y líquido saturado como del vapor recalentado de algunos refrigerantes así como las gráficas p-h de los mismos fluidos frigoríficos. Se da mucha importancia al aspecto práctico de la manipulación de los refrigerantes sin pretender pasar por delante de los fabricantes y empresas especializadas del sector que disponen de su propio material. Manual de Aire Acondicionado y Ventilación Industrial 1 Jorge

Serrano, 2013-04-22. El Manual de Aire Acondicionado en sus 4 tomos pretende orientar el conocimiento de la aplicación y uso del Aire Acondicionado para las instalaciones térmicas de verano e invierno. Los conceptos físicos elementales se consideran ya adquiridos en la formación técnica del lector. En cuanto a la descripción de los componentes y equipos se describen conceptualmente profundizando en aquellos de mayor uso. La información contenida es de suma actualidad y el análisis de carga térmica de verano está aplicado en relación a las últimas normas y datos de cálculo modificadas por I R A M en 2007 y según Normas ASHRAE. La experiencia profesional y pedagógica me ha permitido realizar por primera vez un desarrollo de cálculo de la carga térmica verano invierno para la Argentina. Hasta ahora los sistemas de cálculo a disposición de los técnicos y profesionales contemplaban la aplicación de datos climáticos y de radiación solar para el hemisferio Norte y trasladados al hemisferio Sur por similitud. En el presente trabajo se han tomado los valores reales de temperatura y radiación de 118 estaciones meteorológicas de la Argentina y 30 estaciones de otros países. Se ha consultado toda la bibliografía disponible y las últimas novedades técnicas introducidas en instalaciones térmicas. Como ser del conocimiento del lector de todos los componentes de la obra: arquitectónica, estructuras, fundaciones, cerramientos, carpinterías, solados, revestimientos, etc. las instalaciones en general constituyen el rubro donde en los últimos años se han incorporado mayores innovaciones tecnológicas desde el perfeccionamiento en la fabricación sistemática y robotizada hasta el uso de ordenadores para el cálculo y secuencia controlada de funcionamiento. *Mantenimiento Y Montaje de Instalaciones de Edificio Y Proceso* Luis A. Salcedo

Sigüenza, José Soler Escobar, 1996. Estos técnicos están capacitados para la planificación, montaje, mantenimiento y mejora de este tipo de instalaciones. **Manual de Aire Acondicionado y Ventilación Industrial 2** Jorge Serrano, 2013-05-02

Delibros, 2004. *Memorias de la Semana de Divulgación y Video Científico 2007*, **Información Tecnológica**, 2001. **MODELOS DE POLIGENERACIÓN ENERGÉTICA DISTRIBUIDA EN ÁREAS RESIDENCIALES** Luis Alberto Sánchez Díez, 2012-05-21. En el presente libro se plantean modelos para evaluar el potencial de energía en las ciudades para su autoabastecimiento así como se aplican a las principales ciudades españolas obteniendo el potencial de crecimiento y
