Eton Raptor User Manual:

Biodiversity and Conservation in Europe David L. Hawksworth, Alan T. Bull, 2007-12-03 This book brings together a selection of original studies submitted to Biodiversity and Conservation that address biodiversity and conservation in Europe. Europe is certainly the most intensively inventoried region of the world; detailed maps are available for species distributions while action plans are being drawn up for species under threat. At the same time the wildlife of Europe has been subject to enormous human pressures with limited wilderness sites remaining in most countries. Europe consequently presents a case study of what the human impact on biodiversity has been and also what can be done to improve the situation. The contributions in this volume are drawn from a wide range of countries and discuss diverse organism and habitat types. They collectively provide a snapshot of the sorts of studies and actions being taken in Europe to address issues in biodiversity and conservation. Topical examples that will make the volume especially valuable for use in conservation biology courses.

Macromolecular Protein Complexes V J. Robin Harris, Jon Marles-Wright, 2024-07-04 This volume in the Subcellular Biochemistry SCBI series is a continuation of several previous volumes devoted to the structural and functional study of protein complexes. The expanding nature of this field of study, derived mainly from X-ray crystallography and electron cryomicroscopy, justifies the continuing expansion of coverage in an almost encyclopaedic manner within the SCBI series. Experienced and active researchers in the field shed light on the biology of protein complexes involved in important cellular functions from different perspectives such as AcrAB-TolC and CST. Other topics covered are the Toxin-Antitoxin systems in cell survival, the role of the ATPases CueR and RuvBL1/RuvBL2 in the regulation of gene expression, complexes with multiple functions in the cell such as VCP/p97 or the Vault complex, FtsA and FtsZ in bacterial cell division, GATOR1 and GATOR2 in amino acid sensing, TRPA1 and the Serotonin Transporter in signaling, oligomeric structures in eukaryotic cells such as amyloids and invertases, among others. The book is richly illustrated; the result of an impressive integration of structural data from X-ray crystallography and cryo-electron microscopy. Functional aspects of protein-protein interactions are also featured prominently, providing a valuable contribution for researchers and scholars.
