Carbon Dioxide Capture for Storage in Deep Geologic Formations - Results from the CO₂ Capture Project David C Thomas, Sally M Benson, 2005-01-06 Over the past decade the prospect of climate change resulting from anthropogenic CO₂ has become a matter of growing public concern. Not only is the reduction of CO₂ emissions extremely important but keeping the cost at a manageable level is a prime priority for companies and the public alike. The CO₂ capture project CCP came together with a common goal in mind: find a technological process to capture CO₂ emissions that is relatively low cost and able to be expanded to industrial applications. The Carbon Dioxide Capture and Storage Project outlines the research and findings of all the participating companies and associations involved in the CCP. The final results of thousands of hours of research are outlined in the book showing a successful achievement of the CCP's goals for lower cost CO₂ capture technology and furthering the safe, reliable option of geological storage. The Carbon Dioxide Capture and Storage Project is a valuable reference for any scientists, industrialists, government agencies and companies interested in a safer, more cost efficient response to the CO₂ crisis. Succeeds in tackling the most important issues at the heart of the CO₂ crisis: lower cost and safer solutions and making the technology available at an industrial level. Contains technical papers and findings of all researchers involved in the CO₂ capture and storage project. CCP Consolidates thousands of hours of research into a concise and valuable reference work providing up to the minute information on CO₂ capture and underground storage alternatives. *Proceedings of the ...*
