Peters-Burton,2024-03-13 What if you could challenge your first graders to imagine saving an endangered species learning about different global habitats along the way With this volume in the STEM Road Map Curriculum Series you can Habitats Local and Far Away outlines a journey that will steer your students toward authentic problem solving while grounding them in integrated STEM disciplines Like the other volumes in the series this book is designed to meet the growing need to infuse real world learning into K 12 classrooms This interdisciplinary four lesson module uses project and problem based learning to help students develop an action plan to encourage preservation of an endangered species Students will work in teams to describe the habitat characteristics of a species outside their home region explain why the species is endangered and offer solutions about how humans might be able to support this species survival In developing their plan they will act as explorers of species locally and around the world learning about climate plant and animal inhabitants and key factors affecting habitat vitality or decline To support this goal students will do the following Explain that there are various types of habitats that vary with geographical location around the world Identify several habitats in the U S and globally Explain how various habitats meet animals basic needs Identify climatic characteristics of several habitats Identify humans as species that live within and in interaction with various habitats Identify technological advances and tools that scientists use to learn about habitats and endangered species Design and construct models to demonstrate understanding of features of various habitats local and global and endangered species Apply their knowledge of habitat characteristics interdependence in ecosystems and endangered species to develop an action plan to help preserve their selected endangered species The STEM Road Map Curriculum Series is anchored in the Next Generation Science Standards the Common Core State Standards and the

Framework for 21st Century Learning In depth and flexible Habitats Local and Far Away can be used as a whole unit or in part to meet the needs of districts schools and teachers who are charting a course toward an integrated STEM approach

Bell,University of Chicago. School Mathematics Project,2007 The core of the Everyday Mathematics program for Grades 1 6 the Teacher s Lesson Guide provides teachers with easy to follow lessons organized by instructional unit as well as built in mathematical content support Lessons include planning and assessment tips as well as multilevel differentiation strategies to support all learners *Born to learn* African Union,Association for the Development of Education in Africa,Global Education Monitoring Report Team,2022-10-20 *Elementary Mathematics Curriculum Materials* Janine T. Remillard,Ok-Kyeong Kim,2020-03-16 The book presents comparative analyses of five elementary mathematics curriculum programs used in the U S from three different perspectives the mathematical emphasis the pedagogical approaches and how authors communicate with teachers These perspectives comprise a framework for examining what curriculum materials are comprised of what is involved in reading and interpreting them and how curriculum authors can and do support teachers in this process Although the focus of the analysis is 5 programs used at a particular point in time this framework extends beyond these specific programs and illuminates the complexity of curriculum materials and their role in teaching in general Our analysis of the mathematical emphasis considers how the mathematics content is

presented in each program in terms of sequencing the nature of mathematical tasks cognitive demand and ongoing practice and the way representations are used Our analysis of the pedagogical approach examines explicit and implicit messages about how students should interact with mathematics one another the teacher and the textbook around these mathematical ideas as well as the role of the teacher In order to examine how curriculum authors support teachers we analyze how they communicate with teachers and what they communicate about including the underlying mathematics noticing student thinking and rationale for design elements The volume includes a chapter on curriculum design decisions based on interviews with curriculum authors

Academic Languageing Gisela Ernst-Slavit, Margo Gottlieb, 2025-06-20 Rethink how academic languageing can transform content area teaching For years the teaching of content based academic language to multilingual learners has focused on formulas vocabulary lists and sentence patterns often sidelining students linguistic and cultural strengths Gisela Ernst Slavit and Margo Gottlieb address these challenges by embracing academic languageing an active collaborative student driven process Academic Languageing offers strategies to integrate language and content learning while fostering student engagement voice and agency Dedicated chapters on academic languageing for Language Arts Mathematics Social Studies and Science highlight the dimensions of disciplinary language for each subject and provide strategies for moving learning forward with multilingual learners Additional features include Stop and Think

Tunison,2016-07-27 Over the last decade or two there has been increasing consensus that academic research if used judiciously to guide practice improves both educational policy and pedagogy ultimately leading to better outcomes for students Yet despite this potential there remains a deep ravine between the body of knowledge built through research especially at the intersection between specific interventions and improved student achievement and the actions taken by policy makers administrators and classroom teachers in their regular practice There are myriad reasons for this research practice divide Among them is that it is difficult for district based people to access primary research Furthermore multiple waves of well intentioned research based but largely unsuccessful school reform efforts have resulted in skepticism among practitioners about research and at the same time damaged researchers credibility in the field This book is divided into three broad areas First it develops an engaging analysis of the root causes for the research practice gap in education Second it describes the framework developed and used in a public school district by the author to address the root causes and provides evidence of its efficacy to facilitate greater incorporation of research into school and district level practice Through a process the author calls Knowledge Cultivation the framework uses weekly research summaries for district leaders that are relevant to their real time issues along with suggestions about ways in which the research might be useful The final section of the book includes the actual research summaries used by the author over a five year period **What Mathematics Do**

Students Know and How is that Knowledge Changing? Peter Kloosterman,Doris Mohr,Crystal Walcott,2015-09-01 This volume is intended for researchers curriculum developers policy makers and classroom teachers who want comprehensive information on what students at grades 4 8 and 12 the grades assessed by NAEP can and cannot do in mathematics After two introductory chapters on the design of NAEP the volume contains a chapter on the challenges in analyzing NAEP data at the item level followed by five chapters that report 2005 through 2013 student performance on specific assessment items These chapters are organized by content area and then by topic e g understanding of place value knowledge of transformations ability to use metric and U S systems of measurement and thus provide baseline data on the proportion of students who are able to complete the mathematics tasks currently used in the upper elementary middle and high school mathematics curriculum Additional chapters focus on student reasoning U S performance on international assessments and using construct analysis rather than percent correct on clusters of items to understand student knowledge on specific mathematics topics Several themes emerge from the volume One is that while the rate of improvement in mathematics learning in grades

4 and 8 has slowed in recent years it has slowed more on some topics than others Another is that relatively minor changes in wording can have significant effects on student performance and thus it is difficult to be specific about what students can do without knowing exactly what questions they were asked A third theme is that changes in performance over time can sometimes but not always be understood in terms of what students are taught For example there were substantial gains on several grade 4 items requiring understanding of fractions and that is probably because the amount of instruction on fractions in grades 3 and 4 has been increasing In contrast while relatively few twelfth grade students have ever been good at factoring trinomials performance on this skill seems to be decreasing This suggests that while more students are completing advanced mathematics courses in high school these courses are not helping in the area of factoring trinomials Finally there are limitations to using NAEP as a measure of student performance on the Common Core State Standards To the extent that NAEP can be used however the NAEP data show a substantial gap between expectations and performance

Reinventing STEM in Early Childhood Education Eugene Geist, 2025-05-09 Teaching STEM to young children is about more than helping them learn their numbers and facts It is an important and complex process that to be effective should honor the way children s brains are developing This book outlines how early childhood educators can best support young children s STEM journeys as children naturally take in information about their environment synthesize it and grow in the process This comprehensive text details different theories of learning research on how young brains develop practical information on preparing your environment and yourself for teaching STEM to children guidance for supporting diverse populations of students and developmental guidelines sample standards resources and lesson plans Organized chronologically the book connects relevant STEM topics with each developmental age range and outlines common school standards for each grade Reinventing STEM in Early Childhood Education is meant to be a core text for preservice teachers in math and science methods courses and is also important reading for teacher educators and professional development programs
