One of the beautiful results in the representation theory of the finite groups is McKay's theorem on a correspondence between representations of the binary polyhedral group of $SU(2)$ and vertices of an extended simply laced Dynkin diagram. The Coxeter transformation is the main tool in the proof of the McKay correspondence and is closely interrelated with the Cartan matrix and Poincaré series. The Coxeter functors constructed by Bernstein, Gelfand and Ponomarev play a distinguished role in the representation theory of quivers. On these pages the ideas and formulas due to J. N. Bernstein, I. M. Gelfand and V. A. Ponomarev, H. S. M. Coxeter, V. Dlab and C. M. Ringel, V. Kac, J. McKay, T. A. Springer, B. Kostant, P. Slodowy, R. Steinberg, W. Ebeling and several other authors as well as the author and his colleagues from Subbotin's seminar are presented in detail. Several proofs seem to be new.

September 2019 Monthly Current Affairs with MCQs for Competitive Exams Disha Experts,2019-09-01 **Tropical and Idempotent Mathematics** Grigorii Lazarevich Litvinov, S. N. Sergeev,2009
This volume is a collection of papers from the International Conference on Tropical and Idempotent Mathematics held in Moscow, Russia, in August 2007. This is a relatively new branch of mathematical sciences that has been rapidly developing and gaining popularity over the last decade. Tropical mathematics can be viewed as a result of the Maslov dequantization applied to traditional mathematics over fields. Importantly, applications in econophysics and statistical mechanics lead to an explanation of the nature of financial crises. Another original application provides an analysis of instabilities in electrical power networks. Idempotent analysis, tropical algebra and tropical geometry are the building blocks of the subject. Contributions to idempotent analysis are focused on the Hamilton-Jacobi semigroup, the max-plus finite element method and on the representations of eigenfunctions of idempotent linear operators. Tropical algebras consisting of plurisubharmonic functions and their germs are examined. The volume also contains important surveys and research papers on tropical linear algebra and tropical convex geometry.

Complex Analysis and Dynamical Systems Mark Agranovsky, Anatoly Golberg, Fiana Jacobzon, David Shoikhet, Lawrence Zalcman,2018-01-31
This book focuses on developments in complex dynamical systems and geometric function theory over the past decade, showing strong links with other areas of mathematics and the natural sciences. Traditional methods and approaches surface in physics and in the life and engineering sciences with increasing frequency. The Schramm-Loewner evolution, Laplacian growth and quadratic differentials are just a few typical examples. This book provides a representative overview of these processes and collects open problems in the various areas while, at the same time, showing where and how each particular topic evolves. This volume is dedicated to the memory of Alexander Vasiliev.
