Future Intent-Based Networking Mikhailo Klymash, Mykola Beshley, Andriy Luntovskyy, 2021-12-09 So-called Intent-Based Networking (IBN) is founded on well-known SDN (Software Defined Networking) and represents one of the most important emerging network infrastructure opportunities. The IBN is the beginning of a new era in the history of networking where the network itself translates business intentions into appropriate network configurations for all devices. This minimizes manual effort, provides an additional layer of network monitoring, and provides the ability to perform network analytics and take full advantage of machine learning. The centralized software-defined solution provides process automation and proactive problem solving as well as centralized management of the network infrastructure. With software-based network management, many operations can be performed automatically using intelligent control algorithms, artificial intelligence, and machine learning. As a result, network operation costs, application response times, and energy consumption are reduced, network reliability, and performance are improved, network security, and flexibility are enhanced. This will be a benefit for existing networks as well as evolved LTE-based mobile networks, emerging Internet of Things (IoT) Cloud systems, and soon for the
