ESSAY. Write your answer in the space provided or on a separate sheet of paper.

- 1) Define macroeconomics and provide two key concerns it studies.

*Answer:* Macroeconomics studies the behaviour of an economy as a whole. It focuses its studies upon two key concerns: (1) long-run economic growth, and (2) short-run fluctuations in output and employment (the business cycle).

- 2) What three key statistics do macroeconomists study to assess the health of the economy? Give a short explanation of each.

*Answer:* Macroeconomists study real gross domestic product (GDP), unemployment, and inflation. Real GDP measures the annual output of final goods and services by an economy after adjusting for price changes. Unemployment is a measure of the number of people who are not able to find work despite actively looking for it. Inflation is the increase in the general (or overall) price level.

- 3) What is the difference between nominal and real GDP?

*Answer:* The GDP measures all final goods and services produced in an economy in a year. The problem is, you cannot add apples to typing services and then to movies produced and come up with a meaningful value. As a solution economists add the dollar value of each final good and service. When final goods and services are measured in current prices, we call this the nominal GDP. Real GDP measures output after accounting for year-to-year price changes. This makes it possible to compare quantity changes between years.

- 4) Why do economists measure growth in an economy using real GDP rather than nominal GDP?

*Answer:* Nominal GDP measures the final dollar value of all goods and services produced in an economy in a year. This measurement is made using current dollars. Growth in nominal GDP can occur for three reasons: (1) more goods and services are produced, (2) goods and services have higher prices, and (3) there is an increase in both goods and services produced and their associated prices. Real GDP is measured in constant dollars, so an increase in real GDP simply measures an increase in the production of goods and services.
