Key Vocabulary

adapted	changed to fit or survive in a new setting or situation
Indigenous	all or brought by the earliest known people who lived in a place
substance	the process of providing substances that organisms need in order to live and grow (nourishment)
migration	movement from one place to another
immunity	the ability of an organism to fight off an illness

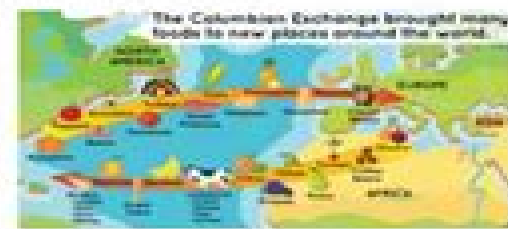

Before the 1400s, the Old World and the New World had

They **adapted** well to the new lands. As a result they began to reproduce and run wild. Conflicts arose because they harmed crops by eating and walking on them.

Some **Indigenous** peoples found horses useful. Horses made it easy to hunt faster. These large-headed animals were an important source of food, clothing, and other things for some Indigenous peoples. However, hunting on horseback was one of the factors that caused bison numbers to drop.

People also brought plants across the ocean. This affected both the Old and New Worlds during the Columbian Exchange. In the Old World, it led to less hunger and better **nutrition**. As a result, Europe's population increased. Potatoes had an especially big effect on life in Europe. When combined with better crops, potatoes have many health benefits. Therefore, they became an important part of many Old World diets.

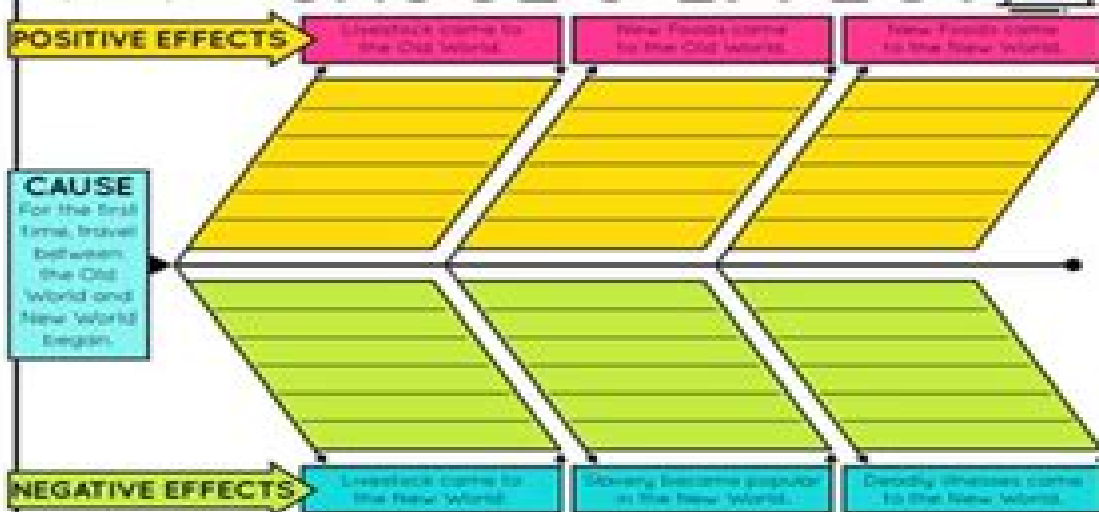

Corn also had a major impact on the Old World. It grows well in some places where crops such as potatoes and wheat do not. Corn was a type of food that had a similar effect in Africa. It provided many people with a healthy source of food which caused a population increase. Other New World crops, including chili peppers, tomatoes, and vanilla, led to changes in food flavors across the Old World.
