The Education Index ,1959 *Gender and Fair Assessment* Warren W. Willingham,Nancy S. Cole,2013-12-16 There have
been many important changes in the participation of women and men in American society over the past quarter century Tests
play a role in those changes by providing evidence of the diverse achievement and proficiency of women and men They aid
the learning process and reflect inequalities in opportunity to learn and participate In addition they provide useful
information in considering what alternatives in education and work make most sense for individuals and influence views
about groups of students educational programs and a wide range of issues For all of these reasons it is important that tests
assess fairly and reflect accurately the ways young people are and are not achieving as well as desired The test performance
of women and men is a research topic of historical interest and has received much attention in recent years Because of this
increased interest there is a great deal of new research and data available The purpose of the study presented in this volume
was to review this new information with two objectives in mind to clarify patterns of gender difference and similarity in test
performance and related achievements and to see what implications those findings might have for fair assessment and as a
corollary examine the assessment process as a possible source of gender differences This study is interested in tests used in
education to assess developed knowledge and skill In order to gain a broader view of gender similarity and difference the
contributors looked at other types of measures and other characteristics of young women and men Their hope is to
contribute to a firmer basis for insuring fairness in tests an objective which is particularly important as the field moves
increasingly to new forms of assessment in which there is less experience **Cumulative Book Index** ,1959 *The Eighth*
