

RESEARCH PROPOSAL SAMPLE

The chosen methods of a particular study would largely be shaped by the paradigm adhered to by the researcher. There are three dominant form of methods used by researchers to collect and analyze data of the issue that they want to conduct research on, which are qualitative, quantitative and mixed research methods. In the field of educational research, it is important to understand the distinctions between qualitative and quantitative research methods because scholars would claim that these methods are too different from each other, and their differences cannot be reconciled. Intuitively, the best research design is dependent on the topic being researched (Hycner, 1985). However, other factors would also shape the decision to use a specific research method. As said, the researcher's paradigm is one such factor, if not the most important factor. Another factor is the researcher's own experiences and preferences

Quantitative Method

Various studies have used the quantitative approach in assessing the use of simulation in medical education. For instance, Morgan and his colleagues performed a study evaluating the efficacy of simulated-based teaching against to videotape teaching through the use of performance based assessments as well as written examinations. The sample used by the researchers was 144 students out of 177 invited. Although the researchers did not exclude anyone in the recruitment process of participants, 33 of them excused themselves and this can have the potential of resulting in selection bias (Polit & Hungler, 1995). Polit and Hungler specifically conducted a quasi-experimental study design, which called for a pretest, posttest and randomization to treatment group. Using this quantitative type of study led to risks such as possible threats to internal validity such as history, maturation, selection, testing as well as instrumentation. In addition, this specific quantitative study was limited by not controlling for any threats to external validity, examples of which are the Hawthorne effect, novelty and experimenter.
