Cryptology and Network Security Swee-Huay Heng, Rebecca N. Wright, Bok-Min Goi, 2010-11-30 The 9th International Conference on Cryptology and Network Security CANS 2010 was held in Kuala Lumpur Malaysia during December 12-14 2010. The conference was co-organized by the Multimedia University MMU Malaysia and Universiti Tunku Abdul Rahman UTAR Malaysia. The conference received 64 submissions from 22 countries, out of which 21 were accepted after a careful and thorough review process. These proceedings also contain abstracts for two invited talks. All submissions were reviewed by at least three members of the Program Committee; those authored or co-authored by Program Committee members were reviewed by at least five reviewers. Program Committee members were allowed to use external reviewers to assist with their reviews but remained responsible for the contents of the review and representing papers during the discussion and decision making. The review phase was followed by a 10-day discussion phase in which each paper with at least one supporting review was discussed; additional experts were consulted where needed and final decisions were made. We thank the Program Committee for their hard work in selecting the program. We also thank the external reviewers who assisted with reviewing and the CANS Steering Committee for their help. We thank Shai Halevi for use of his Web Submission and Review software that was used for the electronic submission and review of the submitted papers, and we thank the International Association for Cryptologic Research IACR for Web hosting of the software.

Designing Secure Systems Michael Melone, 2021-09-27 Modern systems are an intertwined mesh of human process, physical security, and technology. Attackers are aware of this, commonly leveraging a weakness in one form of security to gain control over an otherwise protected operation. To expose these weaknesses, we need a single unified model that can be used to describe all aspects of the system on equal terms. *Designing Secure Systems* takes a theory-based approach to concepts underlying all forms of systems, from padlocks to phishing to enterprise software architecture. We discuss how weakness in one part of a system creates vulnerability in another, all the while applying standards and frameworks used in the cybersecurity world. Our goal is to analyze the security of the entire system, including people, processes, and technology, using a single model. We begin by describing the core concepts of access, authorization, authentication, and exploitation. We then break authorization down into five interrelated components and describe how these aspects apply to physical, human, process, and cybersecurity. Lastly, we discuss how to operate a secure system based on the NIST Cybersecurity Framework CSF concepts of identify, protect, detect, respond, and recover. Other topics covered in this book include the NIST National Vulnerability Database NVD, MITRE Common Vulnerability Scoring System CVSS, Microsoft's Security Development Lifecycle SDL, and the MITRE ATT&CK Framework.
