

Engine oil pressure detection & LPG cut-off device (for U.S. and Australian/Canadian/Specialized) The device prevents fuel from leaking from the carburetor into the intake manifold when the engine is stopped or the ignition switch is turned on.

REGULATOR

The regulator is called a vaporizer converter. It corresponds to a part of the carburetor of the gasoline engine.

The regulator supplies vaporized LPG after pressure reduction to the engine while maintaining the pressure at a fixed level. The LPG is gasified by depriving the engine cooling water passing the regulator of heat. The regulator consists of chamber ① where LPG vaporization starts, chamber ② (first reducing chamber) where the gasified LPG pressure is reduced, chamber ③ (second reducing chamber) for reducing the pressure down to almost atmospheric level for fuel supply using the carburetor venturi negative pressure, and chamber ④ for forced fuel supply during engine starting and idling.
