FORD FUSION ENERGI

Price (after federal tax credit)*	\$32,495 (\$7,500 credit)	\$30,389 (\$3,751 credit)	\$35,744 (\$3,751 credit)
Electric-only miles between charges (per EPA)	38	21	21
EPA miles per gallon equivalent (mpge)	98	100	100
Total range in miles (electric plus gas)	380	620	620
Annual fuel cost (per EPA)†	\$950	\$950	\$950
Who will drive it?	Buyers who want the longest all-electric range of any plug-in hybrid and don't mind having only four seats.	Suburban families looking for a Prius alternative with double the battery miles.	Fans of Ford's sleek new midsize sedan who want solid green street cred.
How fun is it to drive?	"Quick and nippy in traffic, it proceeds with a silent, cooing surge of acceleration, like a downsized Rolls-Royce." (Motor Trend)	"Hustling along a back road is fun until you reach seven-tenths—enthusiast-speak for the point where most people start to grow uncomfortable." (Car and Driver)	"A nice surge of smooth power ... and ultra-quiet operation." (Plugincars.com)
How much gear can you cart around in it?	The trunk is petite, but it's a hatchback with folding rear seats, so two passengers can carry all the gear they need for a camping trip.	If you kick your passengers and fold down the rear seats, plenty. Otherwise, not much.	Fold down the rear seats and you can fit skis through the pass-through. But on its own, the trunk will hold just a pair of carry-ons.
Will it be around in 10 years?	Volt technology is on a roll: GM is introducing the Cadillac ELR coupe in 2014 and is mulling over the idea of a five-seat minivan.	Ford is expanding its hybrid and plug-in hybrid offerings exponentially, so it looks like a long-term commitment.	Ford's new Fusion gets accolades in the competitive family-sedan market, so it should be with us for a long time.
How green is it compared with an all-electric car?			

* Price includes MSRP plus destination charge. † The EPA fuel-cost estimates assume you will drive 15,000 miles per year with an electricity cost of \$0.12 per kilowatt-hour and a gasoline cost of \$3.61 per gallon for regular and \$3.92 per gallon for premium. For comparison, a gasoline-powered, four-cylinder Honda Accord sedan costs \$1,750 to fuel, a V6 Toyota Camry, \$2,100.

Electric and Hybrid Buses for Urban Transport Bogdan Ovidiu Varga, Calin Iclodean, Florin Mariasiu, 2016-08-16 This book provides a systematic assessment of the performance of electric and hybrid buses in urban areas on a daily basis and presents a complete set of technical scenarios to promote their efficient exploitation It will also help readers understand how future buses will perform on specific roads and how the latest technologies can be integrated into existing fleets by proposing a methodology for evaluating the energy consumption for general and specific routes and scenarios Covering all aspects relating to the daily use of electric and hybrid buses including maintenance strategies power train configuration battery replacements route evaluation and charging speed emphasis is placed on energy efficiency and effective implementation Addressing key developments in intelligent vehicle technologies the book presents innovative transportation technologies and a broad range of topics in transportation related sustainability research from vehicle systems and design to mass transit systems [Learning Rates of Electric Vehicles](#) Andreas Zerfaß, 2017-11-01 Governments of many countries consider the electrification of individual passenger transport as a suitable strategy to decrease oil dependency and reduce transport related carbon dioxide CO2 and air pollutant emissions However battery electric vehicles BEVs and plug in hybrid electric vehicles PHEVs have been more

expensive than their conventional counterparts and suffer from relatively short electric driving ranges which still hampers the market potential of these vehicles. Despite persisting shortfalls, mechanisms such as technological learning and economics of scale promise to improve the techno-economic performance of BEVs and PHEVs in the short to mid term. Here the author seeks to obtain insight into the techno-economic prospects of BEVs and PHEVs by i) establishing experience curves and ii) quantifying user costs and the costs of mitigating carbon dioxide and air pollutant emissions in a time series analysis. The analysis captures the situation in Germany between 2010 and 2016. *Handbook on Energy and Climate Change* Roger Fouquet, 2013-01-01.
