

Introducing Macintosh.
What makes it tick. And talk.

Well, to begin with, I'll write of alternating current:

Seriously, some of the hottest hardware is coming down the pipe in the last 5 years.

Macintosh's brain is the same kind ofly-but 32-bit microprocessor we gave our other brainchild, the Lisa™ Personal Computer. The more powerful than the 16-bit 8088 found in current generation microcomputers.

At least in the case of Laser Technology's windows, pull-down menus, mouse commands and icons. All of which make that 32-bit power far more useful by making the Macintosh™ Personal Computer far easier to use than current iterations.

computers. In fact, if you can point without hurting yourself, you can use it.

Now for some small talk:

Thanks to its size, if you can't bring the problem to a Macintosh, you can always

1. **Identify the problem.** The first step in the problem-solving process is to identify the problem. This involves recognizing the symptoms of the problem and determining the underlying cause.

being a Macintosh to the problem. (It weighs 9 pounds less than the most popular "portable.")

Another miracle of miniaturization is Macromin's built-in 3½" drive. Its disks are 40KB—more than conventional 3½" floppy. So while they're big enough to hold a disk full of work, they're small enough to fit in a shirt pocket. And, they're totally encased in a rigid plastic so there's totally protected.

And talk about programming.

There are already plenty of programs to learn a Mathematica from Lake Mathews.¹⁰

a program that, for the first time, lets a personal computer produce virtually any image the human hand can create. There's more software on the way from developers like Microsoft,* Lotus,** and Software Publishing Corp. to mention a few.

And with Macintosh BASIC, Macintosh Pascal and our Macintosh Toolbox for writing your own mouse-driven programs, you, too, could make big bucks in your spare time.

You can even program Macintosh to talk in other languages, like Hebrew or Serbo-Croatian, because it has a built-in polyphonic sound generator capable of producing high-quality speech or music.

The "Staircase" design is a common one, and is a good example of a staircase design.

with the best accuracy.

All the right connections.

On the back of the machine, you'll find built-in RS-232 and RS-422 AppleLink serial communication ports. Which means you can connect printers, modems and other peripherals without adding I/O cards. It also means that Macintosh is ready to hook in to a local area network (With AppleLink, you will be able to interconnect up to 31 different Apple computers and peripherals.)

time, you can do so without paying for a data-transfer card—that connector's built in, too.

There's also a built-in connector for Macintosh users, a feature that runs up to 1990 on computers that can run our dance-controlled software.

Now that you're very aware of the high-tech technology, the engineering genius and the software resources that surround

The trade from conventional computers will like to point you in the direction of your nearest authorized Apple dealer.

Over 100 of them are eagerly waiting to put a thumb to your hand. A one-point-and-click makes perfectly clear the real price of Macintosh. Visit

as 32-bit Linear Technology or its 512
 floppy disks, or its serial ports, or its soft-
 ware, or its polyphonic sound generator

The real genius is that you don't have to be a genius to use a Macintosh. You just have to be smart enough to buy one.

Soon there'll be just two kinds of people:
Those who use computers, and
those who use Apples.
