BROWNING,2018 **How to Work With the Spectroscope** John Browning,2016-11-12 Excerpt from *How to Work With the Spectroscope A Manual of Practical Manipulation With Spectroscopes of All Kinds Including Direct Vision Rain Band Chemical Solar Star Automatic Micro Screen Bessemer and Accessory Apparatus* For many years I have had almost daily to reply to inquiries respecting the best method of manipulating with various kinds of Spectroscopes It had been suggested to me long since by our highest authority on the subject that I should write a work giving the required information For reasons which will be understood by my friends I had a great objection to issue such a work and trusted it would be done by some of the leading scientific men who have worked in this direction But recently the inquiries for information have been more and more numerous and I am compelled both to save my own time and to assist my numerous correspondents to attempt to supply what appears to be an evident want Mr Proctor s admirable little Manual on the Work of the Spectroscope will be found invaluable by those who do not wish to incur the expense of Roscoe s or Schellen s works on Spectrum Analysis But Mr Proctor states that it did not enter into his plans to give detailed instructions for the use of the various kinds of Spectroscopic Apparatus About the Publisher Forgotten Books publishes hundreds of thousands of rare and classic books Find more at www.forgottenbooks.com This book is a reproduction of an important historical work Forgotten Books uses state of the art technology to digitally reconstruct the work preserving the original format whilst repairing imperfections present in the aged copy In rare cases an imperfection in the original such as a blemish or missing page may be replicated in our edition We do however repair the vast majority of imperfections successfully any imperfections that remain are intentionally left to preserve the state of such historical works How to Work with the Spectroscopie. A Manual of Practical Manipulation with Spectroscopes of All Kinds, Etc John Browning (F.R.A.S.),1878 **How to Work with the Spectroscope** John Browning,1882 *Manual of Spectroscopy* Theodore Abijah Cutting,1949 CONTENTS Preface I History and Theory of Spectroscopy 1 Historical Review 2 The Atom in Spectroscopy II Light Sources 1 The Electric Arc 2 The Spark III Spectroscopes 1 Optical Systems 2 Industrial Spectrographs 3 Spectroscope Construction IV Spectroscopic Analysis 1 Qualitative Analysis 2 Determinations 3 Quantitative Analysis V The Spectroscope in Mineralogy 1 Tests Used in Mineral Identification 2 Application of the Spectroscope in Mineral Classification VI Characteristic Lines of the Elements VII Wave Length Table Chart Appendix Conversion Table Bibliography Firms Selling Spectrographic Materials Index PREFACE Too many chemists mineral collectors prospectors and even ass ayers struggle with tedious chemical and uncertain Hame

and blowpipe tests when a spectroscope would give far more prompt results With electricity universally available and with present day instruments and parts so low in cost spectroscopic equipment should be in every school and laboratory This book has been written to assist those who wish to analyze ores minerals alloys and inorganic chemicals or wish to teach others to do so In the qualitative analysis of such materials there is no instrument so rapid and accurate as the spectroscope although the analyst must remain within its limits of operation This is also true of the quantitative analysis of these materials Although speed comes only after some experience one may very soon acquire the necessary technique for accurate determinations The author has attempted to point out some of the short cuts to quick spectroscopic success Direct methods of burning samples are shown the key lines of each element have been selected and a new chart table has been prepared which shows both the spacing of spectral lines and their wave lengths An increasing number of schools and universities have courses in spectroscopy and many industrial plants use spectrographic equipment to speed up the solution of their special problems of analysis The bulk and cost of spectroscopes tend to increase in geometric ratio with efficiency and thus the price of a commercially built high dispersion instrument is usually beyond the reach of the individual analyst The parts necessary to make a powerful instrument are few and the essential construction is very simple The writer believes that instructions for making effective instruments at costs so low as to be within the reach of all will be appreciated One section of the book has therefore been devoted to such instructions Largely from his own experience but also from the literature see bibliography a considerable amount of material has been arranged in what is hoped will be helpful form
