Lomber,Jos Eggermont,2006-10-12 The brain has a remarkable ability to adapt in the event of damage in many cases shifting

responsibility for specific cognitive functions to other non damaged brain regions This plasticity can be crucial in aiding recovery from stroke trauma and peripheral damage such as eye or ear damage Over the past thirty years our view of cortical plasticity has evolved greatly Early studies suggested that changes to cortical function due to peripheral lesions could only occur during development and that these plastic changes were specific to a particular temporal window or critical period Over time it has been demonstrated that cortical modifications as a consequence of either peripheral or central lesions can induce adaptive or beneficial changes in cortical function in an effort to preserve or enhance function More recently studies have identified that many of these adaptive changes once thought only possible in the developing brain are also possible in the mature or developed brain At present many laboratories are defining the beneficial capabilities of cerebral cortex plasticity upon which many proactive and therapeutic strategies may be developed in order to maximize the reprogramming capabilities of the cerebrum Reprogramming the Cerebral Cortex describes these exciting studies and examines adaptive cortical plasticity in a variety of systems visual auditory somatomotor cross modal language and cognition The book leads the reader through the complexities and promise of neuroplasticity and presents insights into current and future research and clinical practice It is unique in looking at the beneficial capabilities of cerebral cortex plasticity upon which many proactive and therapeutic strategies may be developed The book will be a valuable resource for behavioural systems computational and cognitive neuroscientists as well as clinicians and neuropsychologists
