Ruiz-Capillas, Ana Herrero Herranz, 2019-07-16 Biogenic amines have been known for some time These compounds are found in varying concentrations in a wide range of foods fish cheese meat wine beer vegetables etc and their formations are influenced by different factors associated to those foods composition additives ingredients storage microorganism packaging handing conservation etc The intake of foods containing high concentrations of biogenic amines can present a health hazard Additionally they have been used to establish indexes in various foods in order to signal the degree of freshness and or deterioration of food Nowadays there has been an increase in the number of food poisoning episodes in consumers associated with the presence of these biogenic amines mainly associated with histamines Food safety is one of the main concerns of the consumer and safety agencies of different countries EFSA FDA FSCJ etc which have as one of their main objectives to control these biogenic amines principally histamine to assure a high level of food safety Therefore it is necessary to deepen our understanding of the formation monitoring and reduction of biogenic amines during the development processing and storage of food even the effect of biogenic amines in consumers after digestion of foods with different levels of these compounds With this aim we are preparing a Special Issue on the topic of Biogenic Amines in Food Safety and we invite researchers to contribute original and unpublished research articles and reviews articles that involve studies of biogenic amines in food which can provide an update to our knowledge of these compounds and their impacts on food quality and food safety

Manual para el análisis de aguas residuales Tatiana Rodríguez Chaparro, Karol Lucía Fuentes Escobar, Alan Josué Álvarez Pulido, Víctor Manuel Poveda Gómez, 2023-03-01 Los objetivos de desarrollo sostenible 3 Salud y Bienestar y 6 Agua Limpia y Saneamiento han mostrado la necesidad de las comunidades de tener un buen manejo y control de las aguas potables y residuales Estas son algunas de las metas m s importantes de los gobiernos porque permiten mejorar la calidad de vida de las personas reducir la brecha de la desigualdad promover las buenas pr cticas en salud p blica con el objetivo de reducir la presencia de enfermedades transmitidas por aguas contaminadas A pesar de que el conocimiento en las tecnolog as para tratamiento de las aguas residuales ha crecido notablemente el avance en el aprendizaje de las t cnicas anal ticas necesita

comprenderse mejor para evaluar el correcto funcionamiento de los procesos que involucra una planta de tratamiento de agua. En este sentido, este libro es un apoyo para la docencia e investigación ya que recopila y documenta el trabajo realizado durante más de diez años en el Laboratorio de Saneamiento Ambiental de la UMNG en torno al estudio de métodos analíticos para monitorear y evaluar el desempeño de diferentes tecnologías basadas en procesos biológicos para tratamiento de aguas. Este manual está dirigido a los estudiantes de pregrado y posgrado técnicos de laboratorio, profesores, investigadores que trabajen en su rutina con temáticas afines al saneamiento ambiental como el monitoreo de aguas residuales cuando estas son tratadas por procesos biológicos.

Manual de zooplancton : Ávila Parga, Guery, Dueñas Ramírez, Pedro Ricardo, Sánchez García, Reyes, Villatoro Fraile, Miguel, 2022-02-28. Este manual surge como una estrategia de aprovechamiento del material obtenido durante los muestreos zooplanctónicos realizados con estudiantes de Biología Marina en la Ensenada de Gaira región de Santa Marta en el Caribe colombiano y la conveniencia de contar con un registro de algunas de las especies componentes del zooplancton presente en esas aguas, registro que facilitará en particular a los estudiantes de la región y en general a los investigadores interesados el conocimiento de las especies zooplanctónicas locales. En atención a la biodiversidad encontrada en las muestras y al no poder trabajar en todos los grupos presentes se hizo una selección que tuviera en cuenta que los organismos escogidos representaran a los grupos más desconocidos en la zona de muestreo y sus alrededores. Esperamos que este manual se considere el inicio de una serie y sea un incentivo para que investigadores y amantes de estos organismos realicen un atlas de zooplancton del Caribe y Pacífico de Colombia.

Mars analogs: Environment, Habitability and Biodiversity Yiliang Li, André Antunes, Maggie CY Lau Vetter, David Flannery, 2023-06-15. Martian surface contains diverse lithologies from sedimentary rocks to mafic ultramafic igneous rocks and ground patterns. These rocks record the late stage evolution on the Martian surface from a temperate environment with bodies of liquid water to the current cold and hyper arid environment. The constraints on the key parameters and processes for water-rock interaction, sedimentation of materials and geomorphological development can provide important insights into the environmental change and habitability on the Martian surface. However, due to the difficulty in accessing Martian samples and limited remote sensing data available from the Martian surface, most of the mysteries on Mars remain unraveled. In this proposed research topic, we will focus on geological settings on Earth that are similar to the conditions on Mars. These Mars analogs are employed to infer possible processes on Mars and their impact on habitability and the search for life. The Mars analogs on Earth span a variety of environments such as the super arid sedimentary plains e.g. the Qaidam Basin in the north of the Tibetan Plateau, the Mojave Basin in the USA and the Atacama Desert in South America, the subsurface fracture waters in Precambrian cratons e.g. the Canadian Shield, the Fennoscandian Shield and the Kaapvaal Craton, high salinity localities e.g. Laguna de Terez salt mines and deep sea brines as well as extremely cold and highly radiative environments e.g. polar regions, thin atmosphere. These settings on Earth are more accessible for collecting high quality mineralogical, geochemical, geochronological and microbiological data by the state of the

art facilities These data can provide a solid cornerstone for us to understand the cycles of water and other life essential elements and their impact on habitability and biodiversity in extreme environments on Earth as well as the limits of life and the detection of biosignatures Such research can also provide vital insights on the search for life on other planets and moons

Analytical Instrumentation Gillian McMahon, 2008-03-11 This valuable resource covers the principles of analytical instrumentation used by today's chemists and biologists and presents important advances in instrumentation such as the drive to miniaturise and lab on a chip devices In terms of the lab based analytical instrumentation the five main categories of technique spectroscopic chromatographic electrochemical imaging and thermoanalytical are included and presented in a practical not theoretical way Including relevant examples and applications in a number of fields such as healthcare environment and pharmaceutical industry this book provides a complete overview of the instruments used within the chemistry industry making this an important tool for professionals and students alike **Moody's International Manual**

of the complex network of genetic biochemical physical and metabolic interactions among plants microbial communities and the environment We welcome novel research articles reviews and perspectives that cover topics including molecular biology soil microbial ecology carbon sequestration and biogeochemical cycling and crop productivity promotion in agriculture Case studies and meta analyses that provide practical implications for sustainable land management practices are also welcome
