

Matter - SOL 5.4 – Science Study Guide

Matter is anything that has mass and takes up space. All things, living and dead, are made of matter.	What is matter?
All matter, regardless of its size, shape, or color, is made of particles (atoms and molecules) that are too small to be seen by the eye. There are more than 100 known elements that make up all matter. The smallest part of an element is an atom.	What is matter made of?
Atoms are the smallest particles of matter. Atoms cannot be divided into smaller parts without changing their properties. Atoms have a nucleus surrounded by a cloud of electrons.	What are atoms?
 The diagram illustrates the structure of an atom. At the center is the nucleus, composed of red spheres (protons) and blue spheres (neutrons). Surrounding the nucleus are several elliptical orbits. Small blue dots, representing electrons, are positioned at various points along these orbits. Labels with leader lines identify an 'electron', a 'proton', a 'neutron', and the central 'nucleus'.	What does an atom look like?
Molecules are the smallest whole bit of a substance. Molecules are made of two or more atoms.	What are molecules?
