Manual on Fundamentals of Forging Practice A. M. Sabroff, F. W. Boulger, H. J. Henning, J. W. Spretnak, 1964 The information presented in the Manual was obtained from the literature from industrial sources and from a laboratory scale experimental program designed to study significant forging characteristics of several typical alloys This information can be divided into four major categories 1 Plastic deformation of metals This information deals with the mechanics of plastic deformation and the fundamental principles of metal behavior during deformation 2 Principles of forging This information concerns the empirical relationships developed for forging processes which serve as practical guides for establishing design limits and shop practices 3 Forging processes and practices This information relates to the state of the art of forging and covers such topics as forging equipment types of operations die design lubrications specifications for typical forged shapes

etc and 4 Forging alloys These data treat the forging of specific alloy systems in terms of the influence of material properties on forging behavior and the influence of forging procedure on the properties of the forged product Author **Sputtering Materials for VLSI and Thin Film Devices** Jaydeep Sarkar, 2010-12-13 An important resource for students engineers and researchers working in the area of thin film deposition using physical vapor deposition e g sputtering for semiconductor liquid crystal displays high density recording media and photovoltaic device e g thin film solar cell manufacturing This book also reviews microelectronics industry topics such as history of inventions and technology trends recent developments in sputtering technologies manufacturing steps that require sputtering of thin films the properties of thin films and the role of sputtering target performance on overall productivity of various processes Two unique chapters of this book deal with productivity and troubleshooting issues The content of the book has been divided into two sections a the first section Chapter 1 to Chapter 3 has been prepared for the readers from a range of disciplines e g electrical chemical chemistry physics trying to get an insight into use of sputtered films in various devices e g semiconductor display photovoltaic data storage basic of sputtering and performance of sputtering target in relation to productivity and b the second section Chapter 4 to Chapter 8 has been prepared for readers who already have background knowledge of sputter deposition of thin films materials science principles and interested in the details of sputtering target manufacturing methods sputtering behavior and thin film properties specific to semiconductor liquid crystal display photovoltaic and magnetic data storage applications In Chapters 5 to 8 a general structure has been used i e a description of the applications of sputtered thin films sputtering target manufacturing methods including flow charts sputtering behavior of targets e g current voltage relationship deposition rate and thin film properties e g microstructure stresses electrical properties in film particles While discussing these topics attempts have been made to include examples from the actual commercial processes to highlight the increased complexity of the commercial processes with the growth of advanced technologies In addition to personnel working in industry setting university researchers with advanced knowledge of sputtering would also find discussion of such topics e g attributes of target design chamber design target microstructure sputter surface characteristics various troubleshooting issues useful Unique coverage of sputtering target manufacturing methods in the light of semiconductor displays data storage and photovoltaic industry requirements Practical information on technology trends role of sputtering and major OEMs Discussion on properties of a wide variety of thin films which include silicides conductors diffusion barriers transparent conducting oxides magnetic films etc Practical case studies on target performance and troubleshooting Essential technological information for students engineers and scientists working in the semiconductor display data storage and photovoltaic industry *Aerospace Materials and Material Technologies* N.
