Exakt E Series User Manual:

Method of Dimensionality Reduction in Contact Mechanics Valentin L. Popov, Markus Hess, Emanuel

Willert, 2018-08-08 The present book is a collection of open access papers describing the foundations and applications of the Method of Dimensionality Reduction MDR first published in the Journal Facta Universitatis Series Mechanical Engineering in the years 2014 2018 The Method of Dimensionality Reduction MDR is a method of calculation and simulation of contacts of elastic and viscoelastic bodies It consists essentially of two simple steps a substitution of the three dimensional continuum by a uniquely defined one dimensional linearly elastic or viscoelastic foundation Winkler foundation and b transformation of the three dimensional profile of the contacting bodies by means of the MDR transformation As soon as these two steps are done the contact problem can be considered to be solved For axial symmetric contacts only a small calculation by hand is required which does not exceed elementary calculus and will not be a barrier for any practically oriented engineer Alternatively the MDR can be implemented numerically which is almost trivial due to the independence of the foundation elements In spite of its simplicity all results are exact The present book brings together papers covering the most important aspects of the MDR and providing a practical guide for its use

The Use of Models in Medieval Book Painting Monika E. Müller, 2014-06-02

Until recently the phenomenon of copying in medieval book painting has been considered mainly in terms of the reconstruction of pictorial sources used for the composition or iconography of miniatures initials or decorative elements Although historic sources only rarely mention the circumstances of manuscripts production one particular widely accepted hypothesis has prevailed until now according to which artists used model drawings or sketch books with the aim of facilitating the production of copies and the creation of new picture cycles However it is no longer sufficient to regard medieval book painting in its diachronic dimension only through these lenses Rather one should consider Robert W Scheller's critique that When using the model hypothesis one must always be mindful of other factors which are known to have played a part in the transmission of art in the Middle Ages The contributions of this volume deal with these issues by focusing on book painting between the 10th and 16th centuries
