Rethinking Cancer Bernhard Strauss, Marta Bertolaso, Ingemar Ernberg, Mina J. Bissell, 2025-09-09 Leading scientists argue for a new paradigm for cancer research proposing a complex systems view of cancer supported by empirical evidence Current consensus in cancer research explains cancer as a disease caused by specific mutations in certain genes Thanks to dramatic advances in genome sequencing never before have we known so much about the individual cancer cell and yet it is still unclear how to use this knowledge for treatment success In this volume leading researchers argue for a new theory framework for understanding and treating cancer The contributors propose a complex systems view of cancer presenting conceptual building blocks for a new research paradigm supported by empirical evidence The contributors first discuss the new research framework in terms of theoretical foundations and then take up the relevance of a systems approach reviewing such topics as nonlinearity recurrence after treatment the cellular attractor concept network theory and noncoding DNA the dark matter of our genome They address the temporality of cancer progression drawing on evolutionary theory and clinical experience Finally they cover the dominant role of the tissue microenvironment in cancer analyzing topics including altered metabolic pathways the disease defining influence on metastasis and the interconnectedness of different environmental niches across levels of organization

Why Don't Penguins' Feet Freeze? New Scientist, 2016-09-01 Why Don't Penguins Feet Freeze is the latest compilation of readers answers to the questions in the Last Word column of New Scientist the world's best selling science weekly Following the phenomenal success of Does Anything Eat Wasps the Christmas 2005 surprise bestseller this new collection includes recent answers never before published in book form and also old favourites from the column's early days Yet again many seemingly simple questions turn out to have complex answers And some that seem difficult have a very simple explanation New Scientist's Last Word is regularly voted the magazine's most popular section as it celebrates all questions the trivial idiosyncratic baffling and strange This new selection of the best is popular science at its most entertaining and enlightening

Network Calculus Jean-Yves Le Boudec, Patrick Thiran, 2003-08-06 Network Calculus is a set of recent developments that provide deep insights into flow problems encountered in the Internet and in intranets The first part of the book is a self contained introductory course on network calculus It presents the core of network calculus and shows how it can be applied to the Internet to obtain results that have physical interpretations of practical importance to network engineers The second part serves as a mathematical reference used across the book It presents the results from Min plus algebra needed for network calculus The third part contains more advanced material It is appropriate reading for a graduate course and a source of reference for professionals in networking by surveying the state of the art of research and pointing to open problems in network calculus and its application in different fields such as multimedia smoothing aggregate scheduling adaptive guarantees in Internet differential services renegotiated reserved services etc
