

Shark Life Cycle

Stage One

Impregnating

This stage can last from 4 months to 2 years, depending on the species. Sharks can carry their offspring in different ways before being born.

Oviparity: Some sharks lay eggs which are protected inside of an egg case. These are sometimes called 'mermaid's purses'. Bullhead sharks are oviparous sharks.

Viviparity: Viviparous sharks live inside their mothers until they are ready to be born. They are fed via a placenta, similar to mammals. They are born fully developed like the hammerhead shark.

Oothecaparity: Most sharks are oothecaparous. The eggs hatch and develop inside their mother before being born. The great white shark's life cycle begins in this way.

Stage Two

Pups

A baby shark is called a pup. Pups have to take care of themselves from birth, including hunting for their own food.

Stage Three

Many sharks grow very slowly and it can take up to 20 years for a shark to become an adult.

Stage Four

Once a shark is fully mature, it is considered an adult. Most sharks live between 20 and 30 years.
