Rassias, 1994 This book emphasizes the interdisciplinary interaction in problems involving geometry and partial differential equations It provides an attempt to follow certain threads that interconnect various approaches in the geometric applications and influence of partial differential equations A few such approaches include Morse Palais Smale theory in global variational calculus general methods to obtain conservation laws for PDEs structural investigation for the understanding of the meaning of quantum geometry in PDEs extensions to super PDEs formulated in the category of supermanifolds of the geometrical methods just introduced for PDEs and the harmonic theory which proved to be very important especially after the appearance of the Atiyah Singer index theorem which provides a link between geometry and topology **Elements of Geometry and Trigonometry; with notes.
