Hope Debra illustrates how teachers can deliver learning experiences that genuinely link knowledge to life. Working on the premise that a strong curriculum is supported by five key pillars of practice: coherence, credibility, creativity, compassion, and community, she presents a plethora of examples that demonstrate how schools, parents, pupils, and the wider local community can learn together to build from within. Debra enquires into the ways in which schools can create units of work that are both knowledge and humanity rich and challenges the view that the role of children is simply to listen and learn, instead advocating their active engagement with local and global issues. She does so by delving into the role of pedagogy as a means of empowering children and by exploring some of the more overlooked pedagogical tools that can have a great impact on children's learning and well-being: story, movement, and play, as well as some of the recent research into memory and retention. Towards the back of the book, you will find case studies demonstrating how teachers can work with both their own and other subject departments across the school to plan in ways that allow for pupil choice, autonomy, and responsibility. Furthermore, there are some accompanying planning documents for these examples provided in the appendix: The Seed Catalogue, which you may find useful, and these documents are also available for download. Suitable for teachers and leaders in all schools.

**Handbook of Educational Psychology and Students with Special Needs** Andrew J. Martin, Rayne A. Sperling, Kristie J. Newton, 2020-02-18. Handbook of Educational Psychology and Students with Special Needs provides educational and psychological researchers, practitioners, policy makers, and graduate students with critical expertise on the factors and processes relevant to learning for students with special needs. This includes students with attention deficit hyperactivity disorder, other executive function difficulties, behavior and emotional disorders, autism spectrum disorder, intellectual disabilities, learning disabilities, dyslexia, language and communication difficulties, physical and sensory disabilities, and more. With the bulk of educational psychology focused on mainstream or typically developing learners, relatively little educational psychology theory, research, measurement, or practice has attended to students with special needs. As clearly demonstrated in this book, the factors and processes studied within educational psychology: motivation and engagement, cognition, and neuroscience, social, emotional, development, instruction, home and school environments, and more, are vital to all learners, especially those at risk or disabled. Integrating guidance from the DSM 5 by the American Psychiatric Association and the International Classification of Diseases ICD 10 by the World Health Organization, this book synthesizes and builds on existing interdisciplinary research to establish a comprehensive case for effective psycho-educational theory, research, and practice that address learners with special needs. Twenty-seven chapters by experts in the field are structured into three parts: on diverse special needs categories, perspectives from major educational psychology theories, and constructs relevant to special needs learning, development, and knowledge building.

**Iraqi Kurdistan, the PKK and International Relations** Hannes Černý, 2017-07-28. Due to its primacy in explaining issues of war and peace in the international arena, the discipline of International Relations (IR) looms large in analyses of and responses to ethnic conflict in academia, politics, and popular media.

in particular with respect to contemporary conflicts in the Middle East Grounded in constitutive theory this book challenges how ethnic ethno nationalist conflict is represented in explanatory IR by deconstructing its most prominent state centric models frameworks and analytical concepts As much a critique of contemporary scholarship on Kurdish ethno nationalism as a detailed analysis of the most prominent Kurdish ethno nationalist actors the book provides the first in depth investigation into the relations between the PKK and the main Iraqi Kurdish political parties from the 1980s to the present It situates this inquiry within the wider context of the ambiguous political status of the Kurdistan Region of Iraq its relations with Turkey and the role Kurdish parties and insurgencies play in the war against ISIS in Iraq and Syria Appreciating these complex dynamics and how they are portrayed in Western scholarship is essential for understanding current developments in the Iraqi and Syrian theatres of war and for making sense of discussions about a potential independent Kurdish state to emerge in Iraq Iraqi Kurdistan provides a comprehensive and critical discussion of the state centric and essentialising epistemologies ontologies and methodologies of the three main paradigms of explanatory IR as well as their analytical models and frameworks on ethnic identity and conflict in the Middle East and beyond It will therefore be a valuable resource for anyone studying ethnicity and nationalism International Relations or Middle East Politics

**Strategic Instincts** Dominic D. P. Johnson, 2020-09-08 A very timely book Anne Marie Slaughter CEO of New America How cognitive biases can guide good decision making in politics and international relations A widespread assumption in political science and international relations is that cognitive biases quirks of the brain we all share as human beings are detrimental and responsible for policy failures disasters and wars In Strategic Instincts Dominic Johnson challenges this assumption explaining that these nonrational behaviors can actually support favorable results in international politics and contribute to political and strategic success By studying past examples he considers the ways that cognitive biases act as strategic instincts lending a competitive edge in policy decisions especially under conditions of unpredictability and imperfect information Drawing from evolutionary theory and behavioral sciences Johnson looks at three influential cognitive biases overconfidence the fundamental attribution error and in group out group bias He then examines the advantageous as well as the detrimental effects of these biases through historical case studies of the American Revolution the Munich Crisis and the Pacific campaign in World War II He acknowledges the dark side of biases when confidence becomes hubris when attribution errors become paranoia and when group bias becomes prejudice Ultimately Johnson makes a case for a more nuanced understanding of the causes and consequences of cognitive biases and argues that in the complex world of international relations strategic instincts can in the right context guide better performance Strategic Instincts shows how an evolutionary perspective can offer the crucial next step in bringing psychological insights to bear on foundational questions in international politics

Emotion Measurement Herbert L. Meiselman,2016-04-12 Emotion Measurement reviews academic and applied studies in order to highlight key elements of emotions which should be considered in the development and validation of newer commercial methods of emotion measurement The goal of the book is practical but the approach will be both academic and applied It is aimed primarily at sensory scientists and the product developers they work alongside who require knowledge of measuring emotion to ensure high levels of consumer acceptability of their products The book begins with a review of basic studies of emotion including the theory physiology and psychology of emotions these are the standard studies of which food and sensory scientists as well as product developers need to be aware The next section highlights methods for studying emotions on a relatively basic level

The book then moves to practical applications with chapters on emotion research in food and beverage as well as in a range of product and clinical settings Finally there is a treatment of cross cultural research on emotions This is critical because much of the newer commercial research is aimed at markets around the world requiring methods which work in many cultures The book ends with an integrative summary of the material presented Serves as the first book on the market on emotion measurement aimed at sensory scientists and production development practitioners working in commercial R and D Also useful for psychologists with an interest in emotion Brings together applied and academic strands of emotion measurement research for the first time Focuses on cross cultural studies of emotions which is currently lacking from most of the literature in the field      **The Psychology of Being Human** Zick Rubin, Elton B. McNeil, 1983
