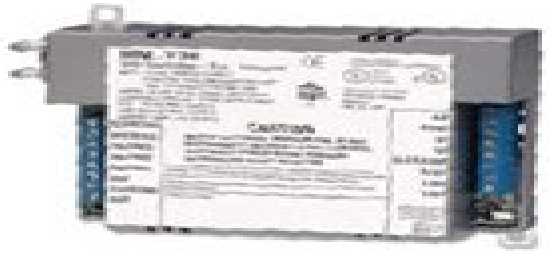
# MicroNet VAV Series Controller



## MicroNet VAV Controllers MNL-V3RVx

The TAC I/A Series MicroNet™ VAV (Variable Air Volume) Controller is an interoperable controller designed in accordance with LonMark® guidelines. When programmed using WorkPlace Tech Tool (WP Tech) or loaded with a pre-engineered application, it provides control strategies for pressure independent terminal boxes with, or without, reheat capabilities. The VAV series controller features Sensor Link (S-Link) support, LED indication, one digital input, one universal input, three digital outputs, one analog output, an integral patented pressure transducer, and two triac outputs for interface with an external actuator. These controllers can function either in a standalone mode or as part of a LonWorks® TP/FT-10 Free Topology communications network.

The VAV series controller offers the advantages of standalone or networked control. Using a TAC I/A Series MicroNet Sensor (MN-Sx Series), the operator can monitor controller performance and edit operational values. The WorkPlace Tech Tool software is used to program the controllers or download applications from the application library.
