Name: _____ Date: _____

EXTENDING FROM 1D TO 2D: FUNCTIONS
 1D: NUMBER 1 (Unit 1, Lesson 4.10)

Most eighth-grade mathematics students learn the concept of a function. Later, most of the important concepts in mathematics, the definition of a function is simply in the point of being really understood. What you will learn the following definition:

Definition: A function is any "rule" that assigns exactly one output value to each input value (number). These rules can be understood in different ways, the most common being equations, graphs, tables, and verbal rules. We call the input variable **independent** and output variable **dependent**.

Example 1: The number of drinks sold at a place usually varies, say, as the number of days of the week and we then describe each day for 10 days each.

Let's find the independent and dependent variables in this example:

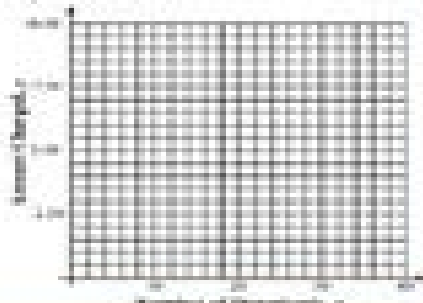

Independent: _____ Dependent: _____

Let's find the variable below for a variety of independent values:

Number of drinks sold, x	0	5	10	20
Amount charged, y				

Let's let the number of drinks be represented by the variable x and the amount charged in dollars be represented by the variable y . Write an equation that models y as a function of x .

Let's find the equation you found in part (c), produce a graph of the function for all values of x on the interval $0 \leq x \leq 20$. Use a calculator, table, or previous additional coordinate plane to the one you found in part (c).
