safety data from Avinor the Air Navigation Service Provider ANSP in Norway It derives a set of taxonomy and from this develops a causal model for incident accident due to limitations in the surveillance system The taxonomy provides a new method for ANSPs to categorize incidents while the causal model is useful for incident accident investigations The book also provides theoretical justifications for the use of Automatic Dependent Surveillance Broadcast ADS B to overcome the limitations of radar systems and identify areas of improvements to enable seamless ATC services Written in a style that makes it accessible to non specialists Aircraft Surveillance Systems will be of interest to many in the field of aviation particularly ATM safety and accident incident investigation It will also offer a useful reference on this vital topic for air traffic management courses
