

LINEAR EQUATIONS WORD PROBLEMS

Type 1	SLOPE- INTERCEPT	Notes:
1. Evan is going to the county fair this weekend. The admission to the fair is \$5 and the cost per ride is 50¢. If his parents gave him \$20, write and solve a linear equation to find how many rides he can go on.		
2. While visiting Crimson Lake, Sally decided to go kayaking. The rangers charge \$8.50 per hour in addition to a \$25.00 deposit to rent the kayak. If she rented the kayak from 11:30 a.m. to 2:30 p.m., write and solve a linear equation to find the total cost to rent the kayak.		
3. Alex bought a new truck for \$42,935. According to the dealer, the truck will depreciate approximately \$4,200 per year. Write and solve a linear equation to find how many years until the car is worth \$5,135.		
4. If you buy a car wash at the gas station for \$6.00, the cost per gallon is \$2.35. If you have \$40, write and solve a linear equation to find the number of gallons of gas you can afford.		

Type 2	STANDARD FORM	Notes:
5. Sam ordered two hamburgers and three hotdogs from the concession stand at the baseball game. His bill came to \$19.05. If hamburgers cost \$5.25 each, write and solve a linear equation to find the cost of each hot dog.

Gina Wilson Worksheet Systems Word Problems Answer Key:

It's Elementary M. J. Owen, 2000 *Word Problems-Detailed Explanations of Reasoning and Solving Strategies* Bill S. Lee, 2013-12 This is the answer key of Volume 8 of the entire set of 12 volumes of word problems solving strategies. If you want to set a solid foundation in math, grasping the techniques on solving word problems is the key to it. This set of books teaches you the techniques and strategies you need to solve word problems. Sample question in this volume: A lion can live up to 40 years and an elephant can live twice as long. If a sea turtle can live 20 years more than twice as long as the elephant, how many years can the sea turtle live up to? Reasoning and solution: Twice 2 groups of so we can use the 3 elements formulas to solve for one of the elements. An elephant can live twice as long as a lion, 40 years, so the number of years that a lion can live to is the amount in 1 group; the number of groups is 2. We multiply the number of groups, 2, with the amount in each group, 40 years, to find the total amount in the groups or the number of years that the elephant can live up to: $2 \times 40 = 80$ years. A sea turtle can live up to 20 years more than twice as long as the elephant. We need to first find the amount that is twice as much as the elephant's age. The amount in 1 group is the age of the elephant; the number of groups is 2. Twice 2 groups of so we can use the 3 elements formulas to solve for one of the elements. We multiply the number of groups, 2, with the amount in each group, 80, to find the total amount in the groups: $2 \times 80 = 160$ years. Secondly, we need to find 20 years more than twice as long as the elephant, 160 years, or 20 years more than 160 years. We add 20 to 160 to find the number of years that the sea turtle can live up to: $160 + 20 = 180$ years. The techniques and strategies on using the addition and subtraction reasoning and the 3 elements formulas to solve decimal word problems, on using algebra to solve word problems, and on finding the measures of internal angles in triangles are also covered in this volume. There is more in the volume than what is mentioned. Detailed explanations of the reasoning and solving strategies for each and every problem in Volume 8 are given in this book.

Word Problems-Detailed Explanations of Reasoning and Solving Strategies Bill S. Lee, 2013-12 This is the answer key of Volume 11 B of the entire set of 12 volumes of word problems solving strategies. If you want to set a solid foundation in math, grasping the techniques on solving word problems is the key to it. This set of books teaches you the techniques and strategies you need to solve word problems. Sample question in this volume: Lily has 42 books. If Hanna has $1\frac{6}{7}$ more than Lily, how many books does Hanna have? Reasoning and solution: Hanna has $1\frac{6}{7}$ more than Lily; the noun phrase after the word "than" is Lily, so the number of books that Lily has is the amount in 1 or in $1\frac{6}{7}$ or 1 whole. Then Hanna's books are in what fractional part of 1 or 1 whole? Attention: $1\frac{6}{7}$ is not an amount or a quantity but a fractional part. Hanna has $1\frac{6}{7}$ more than Lily means the number of books that Hanna has is in a fractional part that is $1\frac{6}{7}$ more than the fractional part that Lily's books are in. We know that the number of books that Lily has is in 1, so the fractional part that Hanna's books are in is $1\frac{6}{7}$ more than 1: $1 + 1\frac{6}{7} = 2\frac{6}{7}$. So the number of books that Hanna has is in $2\frac{6}{7}$. We multiply the fractional part $\frac{6}{7}$ with the amount in 1, the number of books that Lily has, to find the amount in the fractional part: the number of books that Hanna has: $42 \times \frac{6}{7} = 49$ books. Hanna has

49 books The techniques and strategies on finding percent of increase and percent of decrease on using fractional parts only to solve a word problem and on using formulas to find the circumference and area of a circle The volume teaches more than what is mentioned Detailed explanations of the reasoning and solving strategies for each and every problem in Volume 11 B are given in the book **Word Problems-Detailed Explanations of Reasoning and Solving Strategies** Jessie Strohmman,2013-12 This is the answer key of the twelfth volume of the entire set of 12 volumes of word problems solving strategies If you want to set a solid foundation in math grasping the techniques on solve word problems is the key to it This set of books teach you the techniques and strategies you will need to solve word problems Sample question 93 Peter has read 120 pages of a book that he has just borrowed from the library If the number of pages he has read is $\frac{2}{5}$ less than the number of pages he has not read yet how many pages does the book have Reasoning and solution From the number of pages he has read is $\frac{2}{5}$ less than the number of pages he has not read yet we know that the number of pages he has not read yet the noun phrase after the word than is the amount in 1 whole and the number of pages he has read is in a fractional part that is $\frac{2}{5}$ less than the fractional part the number of pages he has not read yet is in 1 so the number of pages he has read is in a fractional part that is $\frac{2}{5}$ less than 1 or is $\frac{1}{5}$ or is $\frac{3}{5}$ of 1 whole He has read 120 pages so we divide $\frac{3}{5}$ into the amount in it 120 to find the amount in 1 whole the number of pages he has not read yet $120 \div \frac{3}{5} = 120 \times \frac{5}{3} = 200$ pages The number of pages that he has not read is 200 pages The techniques and strategies on using algebraic equations to solve word problems and on solving proportions surface area volume and area of lateral surface of cylinders and cones are also reviewed in the book This book also reviews on using one set of 3 elements formulas and 2 sets of 3 elements formulas to solve whole number word problems decimal word problems and fraction word problems Detailed explanations of the reasoning and solving strategies for each and every problem are given in the book **It is Elementary** M. J. Owen,2000 *Word Problems-Detailed Explanations of Reasoning and Solving Strategies* Bill S. Lee,2013-12 This is the answer key of Volume 11 A of the entire set of 12 volumes of word problems solving strategies If you want to set a solid foundation in math grasping the techniques on solving word problems is the key to it This set of books teaches you the techniques and strategies you need to solve word problems Sample question in this volume A book is 4.00 If it costs $\frac{2}{5}$ as much as a pen how much does the pen cost Reasoning and solution Another way to identify the amount in one whole As as the noun phrase after the second as is considered the amount in 1 whole From it costs $\frac{2}{5}$ as much as a pen a pen is the noun phrase after the second as so the cost of a pen is considered as the amount in 1 whole The fractional part is $\frac{2}{5}$ the amount in the fractional part is 4.00 so we divide the fractional part $\frac{2}{5}$ into the amount in it 4.00 to find the amount in 1 whole $4.00 \div \frac{2}{5} = 4.00 \times \frac{5}{2} = 10.00$ A pen costs 10.00 The techniques and strategies on finding the amount in each group the number of groups the total amount in all the groups the amount in a fractional part a fractional part and the amount in 1 whole are reinforced in this volume How to find a ratio How to use ratios to solve word problems Find the answers in the volume please You are going to find more in this volume than

what is already mentioned Detailed explanations of the reasoning and solving strategies for each and every problem are given in this book **It's Elementary** M. J. Owen, 2000
