Christian Faith in the Light of Evolution David de Pomerai,2020-11-24 Does evolution make faith superfluous Part One of this book looks across the whole spectrum of biology from molecules to ecosystems to human societies and at the fossil history of life on earth concluding that evolution is the only explanatory concept that makes sense of it all Doesn t this demolish the core Christian claim that God created the entire universe Part Two explores whether God might instead embrace that universe with love and compassion without micromanaging or interfering Jesus bears witness to such a God in his kingdom teaching calling Christians to follow his example of humility serving others and valuing what the world considers unimportant This suggests paths of repentance and restraint that are urgently needed in a world facing rapid climate change and likely mass extinction Informational Pragmatism David Krieger,2025-02-24 This thought provoking book explores the philosophical ideas from antiquity to today that influence our understanding of the digital transformation that is ushering in a global network society Digital transformation is understood

as a profoundly philosophical issue reflecting humanity's ongoing socio-technical evolution. Traditional philosophical issues such as the meaning of being, the nature of knowing, and the place of the autonomous rational subject in modern thought are challenged and redefined from the perspective of an informational pragmatism. The book presents a philosophy of information based on a critique of neo-pragmatism from the perspective of actor network theory. A major revision of pragmatism in the form of informational pragmatism is proposed as a philosophy capable of addressing the fundamental questions of the 21st century arising from the emergence of a global network society and the digital transformation.

Evolution of Dynamical Structures in Complex Systems Rudolf Friedrich, Arne Wunderlin, 2012-12-06. Evolution of Dynamical Structures in Complex Systems is dedicated to the founder of synergetics, Hermann Haken, on the occasion of his 65th birthday. This volume is an attempt to gather together and review the new results and developments achieved by researchers from various fields during the last few years. The contents bear witness to the great success in the development of general approaches to synergetic systems as well as remarkable progress in the more traditional fields of synergetics such as lasers and nonlinear optics, hydrodynamics, condensed matter physics, biology, and sociology. Since their inception, the concepts of synergetics and rigorous mathematical theories have been extended to other scientific disciplines such as medicine, artificial intelligence, and synergetic computers and psychology. Here too, these ideas have yielded new insights, raised unexpected questions, and produced innovations in both theoretical and experimental projects. The conception of self-organization, the central theme of Hermann Haken's scientific work, has stimulated epistemological studies that draw relations between synergetics and the German romantic Naturphilosophie. It is fascinating to observe how these intuitive notions of self-organization etc. have now evolved into a precise and holistic scientific comprehension of synergetic systems. We express our deep gratitude to Dr. Angela Lahee from Springer Verlag for her valuable help during the preparation of this book.
