

The DRI327 Series POPT Modules include the DRI327 Series magnetic transducer and the DRI327 (fourth) amplifier. They are used with a distributed control panel to regional terminal (a standard number of on-board measuring points). Future system expansion is very economical as DRI327 Series POPTs can be added anywhere in the system to increase the number of points. Both modules include proven technology that combines good engineering with individual device addressing on one pair of wires. Some terminals provide reliable connections for the data expansion loop and support direct access from wiring. They can be used in a variety of applications on standard outlet boxes, above false ceilings, floors, or other accessible locations.

Use the steps in this section to install and configure the HOFIT module.

- B. Insert a small flat-headed screwdriver into one of the small slots on the side of the incisor.
- C. Twist the screwdriver and remove the crown.

1. Strip the terminal block on the PCB in one half.
2. Then take hold the PCB at the end with the two tabs, carefully but firmly, push one tab away from the PCB and lift the other.
3. Carefully but firmly, push the other tab away from the PCB and lift the entire PCB from the base.

Push the wiring through the wiring opening (refer to Figure 2). Mount the PC/PB base using the supplied hardware to prevent shorting the PCB.

1. Grasp the terminal block on the PCB with one hand, insert the DIP switch end of the PCB under the single tab.
2. Carefully but firmly, push the two tabs on the opposite ends away from the PCB.
3. Gently lay the PCB in place and, if necessary, carefully, push the two tabs toward the PCB until the PCB is firmly in place.

Refer to Table 1 for DDP switch 0 settings and Section 4 for DDP switch configuration settings for J2000A and J2000B.
